

Linaro's Android Platform

LinuxCon Europe 2011

Zach Pfeffer
Linaro Android Platform Lead

Bernhard Rosenkränzer
Android Toolchain Engineer

Mission Statement

Linaro's Android platform is

- Open
- Continuously Improving
- Validated
- Easy-to-Use
- Fully-Enabled
- Optimized
- Built from the **best open source components** for **all member boards**

Achieving our Mission

Release Android builds for our member's boards

- TI
 - Panda, Beagle, Beagle xM
- Freescale
 - iMX53
- ST-Ericsson
 - Snowball
- Samsung
 - Origen

All Member Boards

Pictures and more details...

Achieving our Mission

- Produce “Android-Next” with
 - Linaro GCC 4.6
 - Linux Kernel 3.1
 - Android Platform Source 2.3.5
 - Other components (libjpeg-turbo, libpng)
 - Busybox, ffmpeg, lrzsz
- Provide a CI loop
- Accept changes through Gerrit
- Provide pre-built images

Open

- All work is submitted to its upstream
 - AOSP, kernel, GCC, vendor patches
- Instructions for building and loading builds are open and easy to use
 - [Build Linaro Android from Source](#)
 - [Try a Pre-Built Build](#)
- All builds provided without “registering”
 - <http://android-build.linaro.org>

Open

- Source
 - [git://android.git.linaro.org](https://android.git.linaro.org)
 - [git://git.linaro.org](https://git.linaro.org)
- Vibrant community
 - IRC
 - #linaro, #linaro-android on Freenode
 - The Android team will answer your questions live!
 - Mumble
 - Lists
 - linaro-dev

Continuously Improving

- Monthly milestones
 - <https://launchpad.net/linaro-android/+milestone/11.06>
14 blueprints, 18 bugs
 - <https://launchpad.net/linaro-android/+milestone/11.07>
12 blueprints, 7 bugs
 - <https://launchpad.net/linaro-android/+milestone/11.08>
14 blueprints, 5 bugs
 - <https://launchpad.net/linaro-android/+milestone/11.09>
27 blueprints, 19 bugs
 - <https://launchpad.net/linaro-android/+milestone/11.10>
31 blueprints, 33 bugs (in progress)

Continuously Improving

- New release the last Thursday of the month
- Release Candidate available the Monday before
- Next cycle planning begins during release week

Continuously Improving

- Toolchain Benchmarking
 - Linaro performs monthly benchmarking tests to help gauge toolchain:

Android Toolchain Benchmarks

[11.09](#), [11.08](#), [11.07](#)

- Comparisons are made between:
 - = Current Android NDK
 - = Current month's 4.5 and 4.6 toolchains
 - = Previous month's 4.6 toolchain

Continuously Improving

- Toolchain Benchmarking
 - Fully automated source available [here](#)

Validated

Continuous Integration

- Change Management

Gerrit

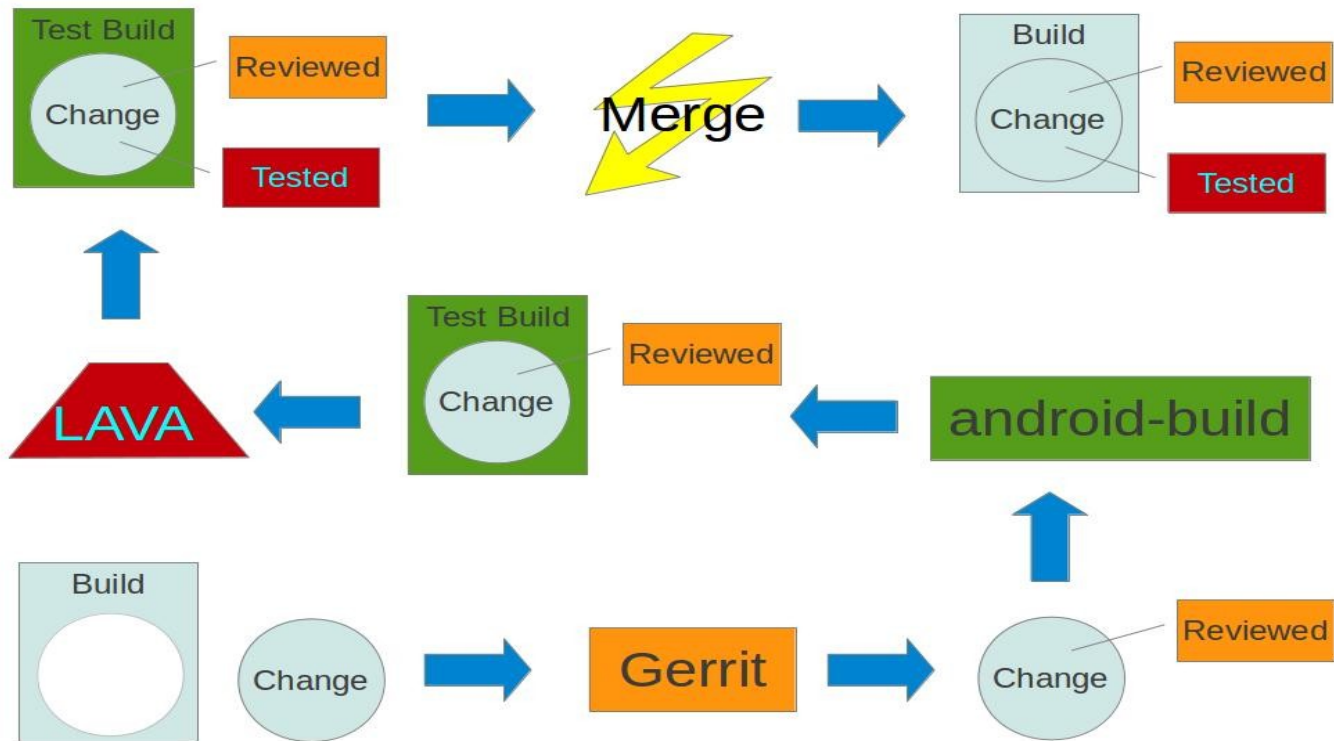

- Automated Regression Testing

LAVA (Linaro Automated Validation Architecture)

- Monkey
 - Oxbench
 - busybox
 - mmttest
 - glmark
- Pre-merge Testing

Validated

The CI Loop

Easy-to-Use

- Trying Android on a member board should be easy
- Building Android and programming it on a member board should be easy

Try a Build

5 Commands and 1 minute

```
wget --no-check-certificate https://android-build.linaro.org/.../boot.tar.bz2
```

```
wget --no-check-certificate https://android-build.linaro.org/.../system.tar.bz2
```

```
wget --no-check-certificate https://android-build.linaro.org/.../userdata.tar.bz2
```

```
bzr branch lp:linaro-image-tools
```

```
./linaro-image-tools/linaro-android-media-create --mmc /dev/sdc
```

```
--dev panda
```

```
--system system.tar.bz2
```

```
--userdata userdata.tar.bz2
```

```
--boot boot.tar.bz2
```

Make and Try a Build

7 Commands (and 1 hour)

wget --no-check-certificate

<https://android-build.linaro.org/.../android-toolchain-eabi-linaro-4.6-...-linux-x86.tar.bz2>

tar -jxvf android-toolchain-eabi-*.tar.bz2

repo init

-u [git://android.git.linaro.org/platform/manifest.git](https://android.git.linaro.org/platform/manifest.git)

-b linaro_android_2.3.5

-m LEB-panda.xml

repo sync

make -j4 TARGET_PRODUCT=pandaboard

TARGET_TOOLS_PREFIX=/workspace/.../arm-eabi- boottarball systemtarball

userdatatarball

bzr branch lp:linaro-image-tools

./linaro-image-tools/linaro-android-media-create --mmc /dev/sdc

--dev panda

--system system.tar.bz2

--userdata userdata.tar.bz2

--boot boot.tar.bz2

Validated

- QA
 - 3 build/test sets a cycle
 - Release Candidate (RC) builds enter week-long QA cycle before final builds
 - QA Tests

Optimize

Let's make Android fast!!!

Optimize

Switched compiler flags

- AOSP default
 - O2 -fno-strict-aliasing
- New
 - O3 -fmodulo-sched -fmodulo-sched-allow-regmoves -Wl,--hash-style=gnu -Werror=strict-aliasing
 - Remove -fno-strict-aliasing

Optimize

-O3

- Optimize for speed over code size
- Speed over compilation time
- Includes
 - finline-functions
 - funswitch-loops
 - fpredictive-commoning
 - fgcse-after-reload
 - ftree-vectorize
 - fipa-cp-clone

Optimize

-fmodulo-sched -fmodulo-sched-allow-regmoves

- Improve loop scheduling
- More **info**

Optimize

`-Wl,--hash-style=gnu`

- Improves program startup time via new hashing algorithm
- Needed to patch the AOSP dynamic linker

Optimize

Remove `-fno-strict-aliasing`

- Enables better optimizations
- Requires a stricter coding style

Example 1

Example 2

- Most violations can be found with
`-Werror=strict-aliasing`
- Cheat!
Override with `-fno-strict-aliasing`

Optimize

-ffast-math

- Dangerous
 - Breaks IEEE standards
- Useful in the skia 2D graphics and OpenGL libraries

Optimize

Board specific optimizations

- Cortex-A9 for Panda, Origen, Snowball
- Cortex-A8 for iMX53, Beagle, Beagle xM

Optimize

Graphite related optimizations

- fgraphite-identity
- floop-block
- floop-interchange
- floop-strip-mine
- ftree-loop-distribution
- ftree-loop-linear

Optimization effectiveness increases with better compiler SMP support

Future Improvements

- OpenMP
 - API for easy multi-core parallelization
- `-ftree-parallelize-loops` for multi-core boards
 - requires android-eabi toolchain
- ARM vs Thumb2
- Locate detrimental `-O3` code size
 - `-fno-inline-functions` may help
- Find more `-ffast-math` compatible code

Future Improvements

- binutils: -Bsymbolic-functions
 - Speed up the dynamic linker
- binutils/gcc: -flto, -fwhole-program
 - Link time optimization
- gcc: -fvisibility-inlines-hidden
 - Improve start-up time
- Move to GCC 4.7

Optimize

More info [here!](#)

Thanks

All Member Boards

- TI: PandaBoard
 - OMAP4430
 - Dual Core 1 Gz Cortex-A9
 - 1 GB LPDDR2
 - 1080p@30fps
 - Encode/Decode H.264, MPEG-4, H.263
 - Decode VP6, VP7
 - DSP, IVA-HD, 2 Cortex-M3 Ducati, Audio back-end (ABE), Imaging Subsystem (ISS), SGX, Image Signal Processor (ISP), still image co-processor (SIMCOP)
 - JTAG, UART, HDMI, DVI-D, Camera Connector, USB OTG/HOST, Microphone Jack, Headphone Jack, 10/100 Ethernet

All Member Boards

- TI: BeagleBoard
 - OMAP3530
 - 720 Mhz Cortex-A8
 - 110 MHz SGX
 - 256 MB NAND, 256MB DDR @ 166 MHz
 - JTAG, UART, DVI-D, USB OTG/HOST, Microphone Jack, Headphone Jack

http://beagleboard.org/static/BBSRM_latest.pdf

All Member Boards

- TI: BeagleBoard xM
 - DM373
 - 1 GHz Cortex-A8
 - 200 MHz SGX
 - 512 MB DDR @ 166MHz
 - JTAG, UART, DVI-D, USB OTG/HOST, Microphone Jack, Headphone Jack, 10/100 Ethernet

http://beagleboard.org/static/BBSRM_latest.pdf

All Member Boards

- Freescale: i.MX53 Quick Start
 - i.MX53
 - 1 GHz ARM Cortex™-A8
 - 1 GB DDR3
 - SGTL5000 Audio Codec
 - HDMI, camera connector SATA, 10/100 Ethernet, Microphone Jack, Headphone Jack
 - 3D Accelerometer
 - I2C, SSI, SPI

All Member Boards

- ST-Ericsson: Snowball
 - Nova A9500
 - Dual Cortex 1 GHz Cortex-A9 with Advanced SIMD (Neon) Extensions
 - Mali-400 GPU
 - 1080p
 - 1 GB of DDR2
 - HDMI, WLAN, Bluetooth, USB OTG, 10/100 Ethernet
 - 3D Accelerometer, 3D Magnetometer, 3D Gyroscope, Barometer

All Member Boards

- Samsung: 'Origen' low cost development board
 - Exynos4210
 - Dual Core 1 GHz Cortex-A9 with Advanced SIMD (Neon) Extensions
 - Mali400 MP4 GPU
 - **1080p@30fps** Hardware Decode of
 - MPEG-4/H.263/H.264, MPEG-2/VC1/Xvi
 - 1GB of High Bandwidth DDR3
 - HDMI, WLAN, Bluetooth, Camera Connector, USB 2.0 OTG/HOST, SD/MMC
 - 8ch, I2C, SATA, PCI Express

Some Interesting Results

- 0xbench 3-D
 - Across all boards
 - Across all builds

Panda Oxbench 3-D Test Result

Build	Toolchain	Kernel	Android
11.04	AOSP 4.4	2.6.38.3	2.3.3
11.05	AOSP 4.4	2.6.35.7	2.3.3
11.06	Linaro 4.5	2.6.38.7	2.3.4
11.07	Linaro 4.6	3.0.0	2.3.4
11.08	Linaro 4.6	3.0.0	2.3.5
11.09	Linaro 4.6	3.0.3	2.3.5
11.10	Linaro 4.6	3.0.4	2.3.5

Panda Oxbench 3-D Test Result

Build	Toolchain	Kernel	Android
11.04	AOSP 4.4	2.6.38.3	2.3.3
11.05	AOSP 4.4	2.6.35.7	2.3.3
11.06	Linaro 4.5	2.6.38.7	2.3.4
11.07	Linaro 4.6	3.0.0	2.3.4
11.08	Linaro 4.6	3.0.0	2.3.5
11.09	Linaro 4.6	3.0.3	2.3.5
11.10	Linaro 4.6	3.0.4	2.3.5

iMX53 Oxbench 3-D Test Result

Build	Toolchain	Kernel	Android
11.08	Linaro 4.6	2.6.38.7	2.3.5
11.09	Linaro 4.6	2.6.38.7	2.3.5
11.10	Linaro 4.6	2.6.38.7	2.3.5

Origen Oxbench 3-D Test Result

Build	Toolchain	Kernel	Android
11.08	Linaro 4.6	3.0.3	2.3.5
11.09	Linaro 4.6	3.0.3	2.3.5
11.10	Linaro 4.6	3.0.4	2.3.5

Snowball Oxbench 3-D Test Result

Build	Toolchain	Kernel	Android
11.07	Linaro 4.6	3.0.0-rc7	2.3.4
11.08	Linaro 4.6	3.0.0-rc7	2.3.5
11.09	Linaro 4.6	3.0.0-rc7	2.3.5
11.10	Linaro 4.6	3.0.0-rc7	2.3.5

Results

- Slowdowns
 - TARGET_CPU_SMP increases locking overhead
 - GCC 4.6 performance regressions
 - Using Linaro Android build parameterization to track down regressions
