Delivered and/or customized by

# What the AOSP does

# Where cyborgstack is going

# Goals

- Truly Open development community
- Nothing is off limits
  - Accept things which will likely **never** make it to AOSP
- Configurability
- Customizability
- Mission-critical
- Ability to provide high security
- Vendor/Platform Independent

# What's (going to be) there?

- glibc-based rootfs add-ons
- LTTng
- “Headless Android”
- BusyBox

# What's it's NOT?

- A replacement for:
  - CynogenMod
  - Linaro's Android work
  - Code Aurora's Android work
  - Rowboat
  - etc.

**Boldly go where no droid has gone before**
