

Static Partitioning with Xen

Dom0-less Xen configurations

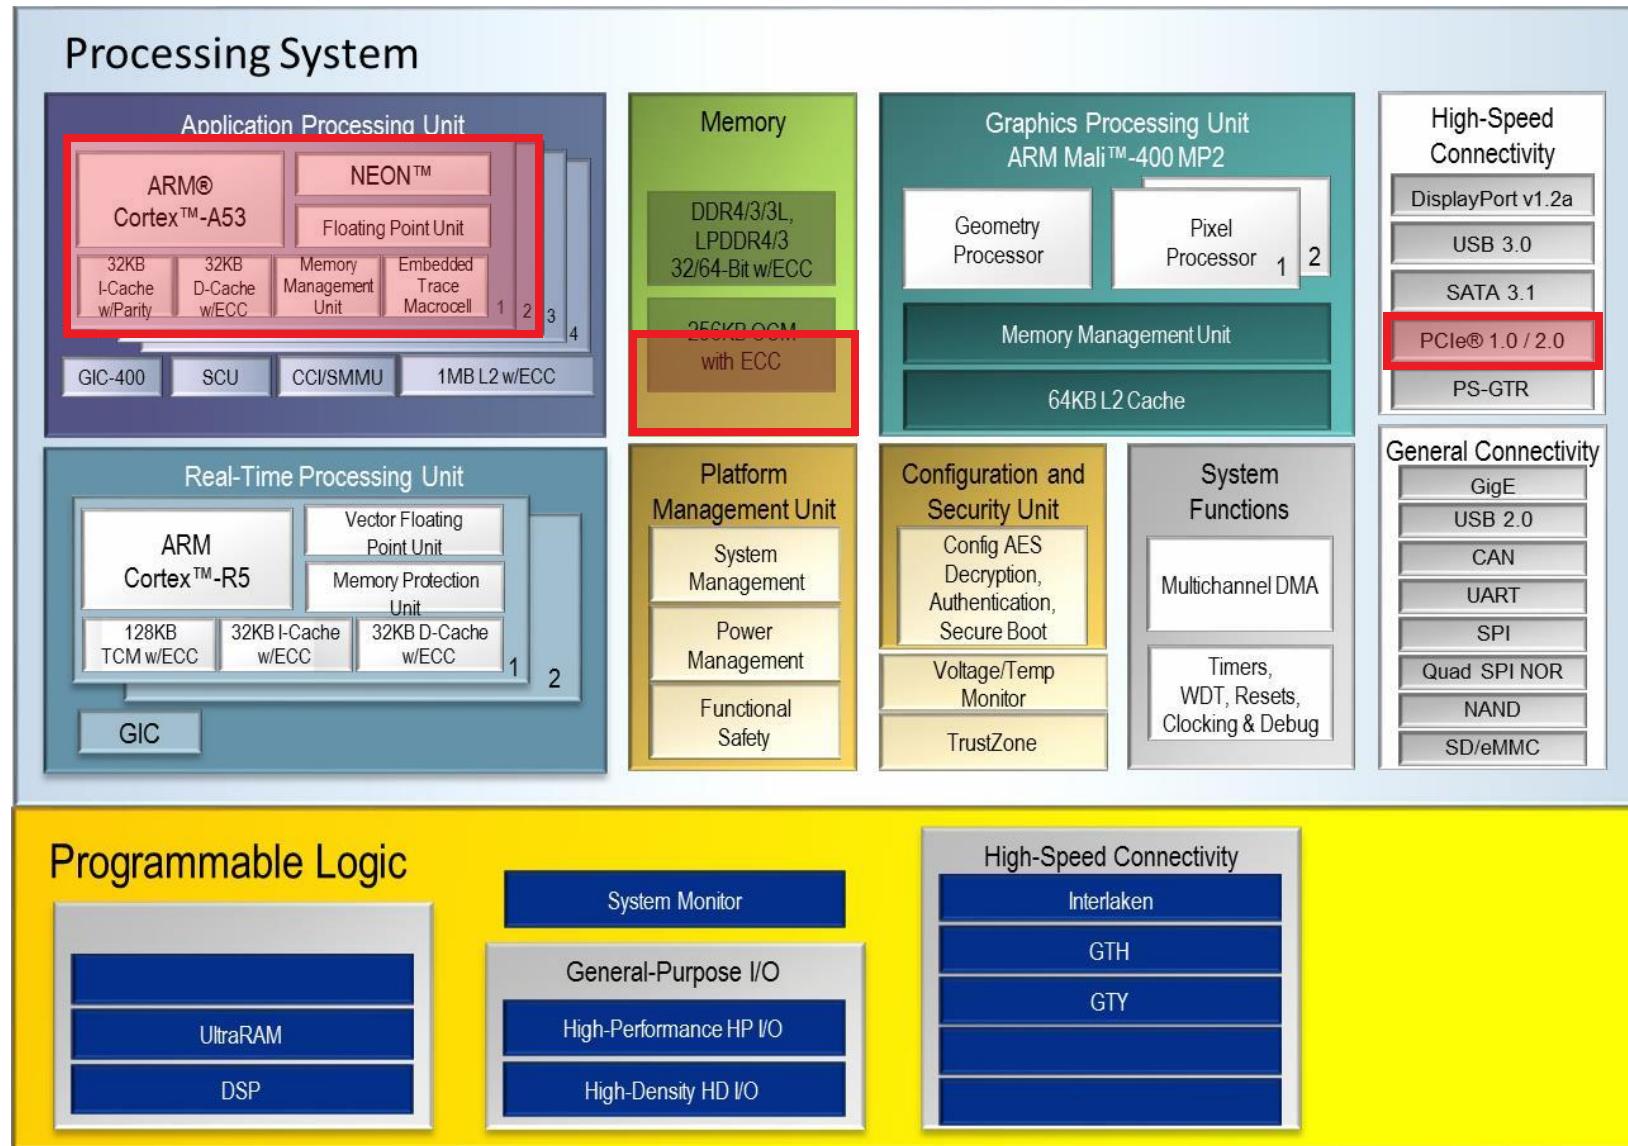

Stefano Stabellini – ELC August 2019

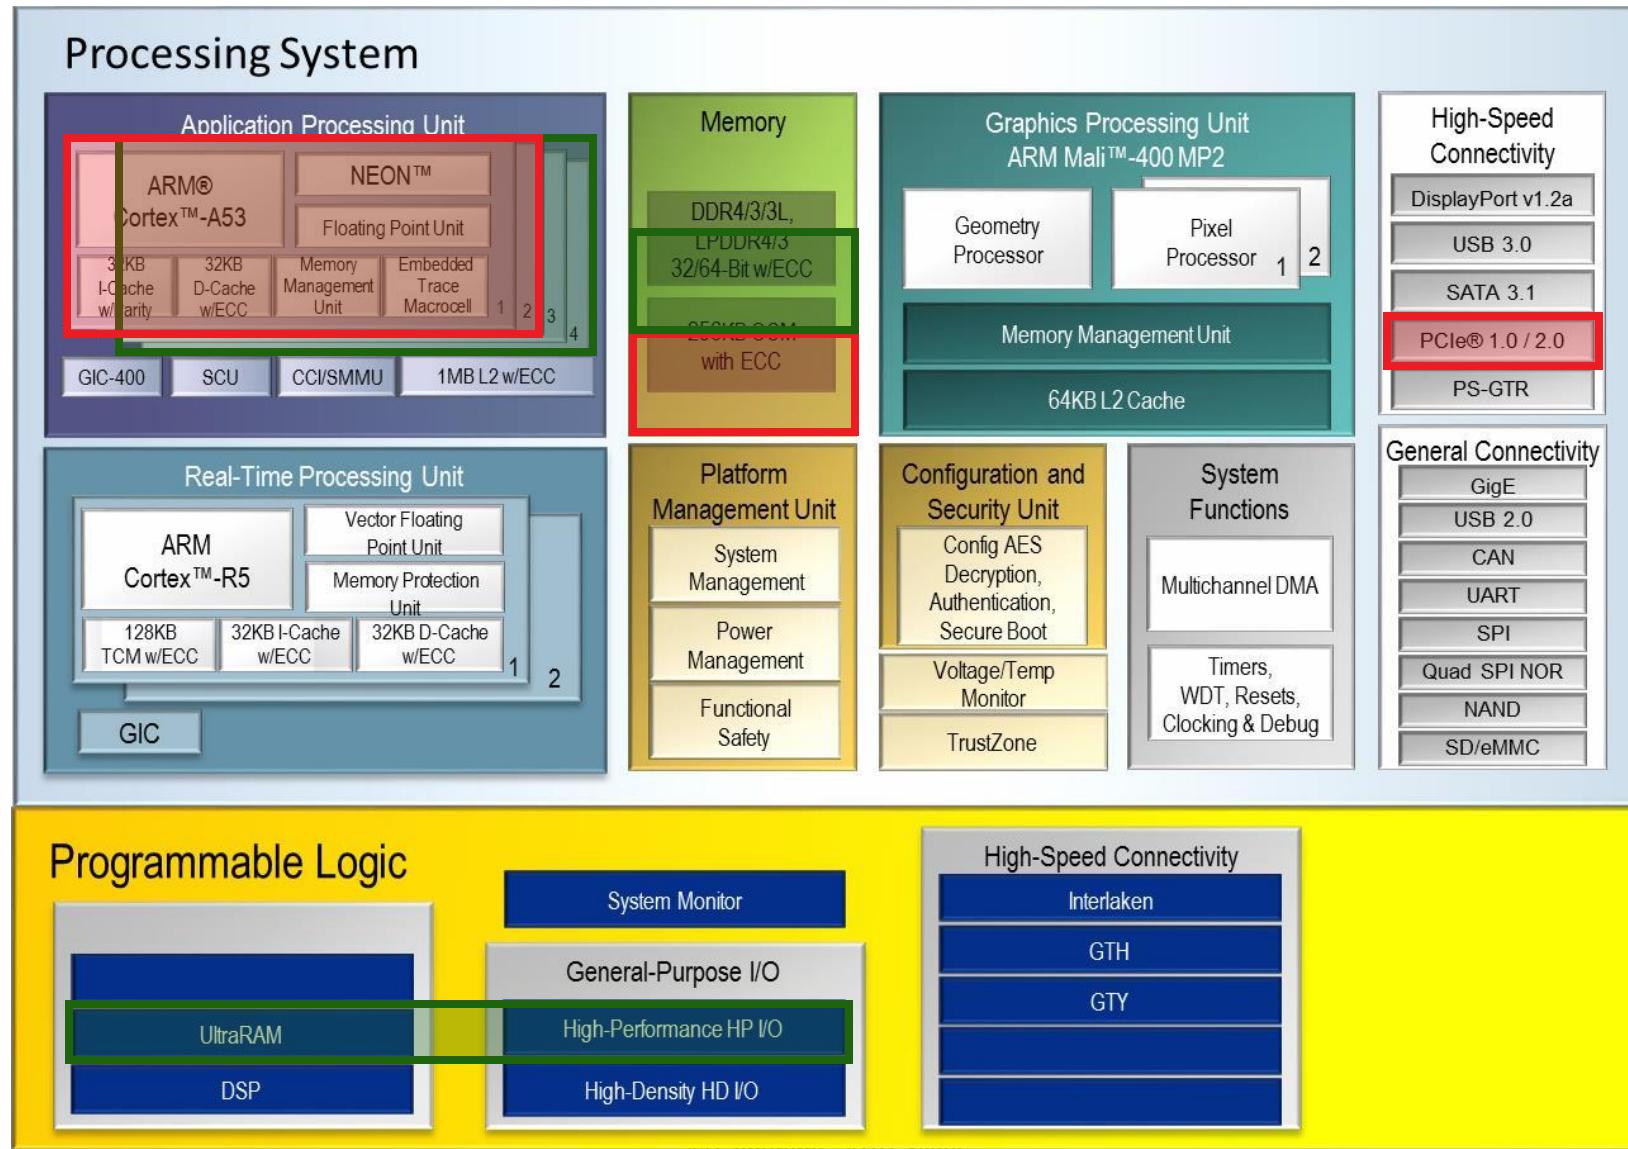

Static Partitioning

Static Partitioning

Static Partitioning

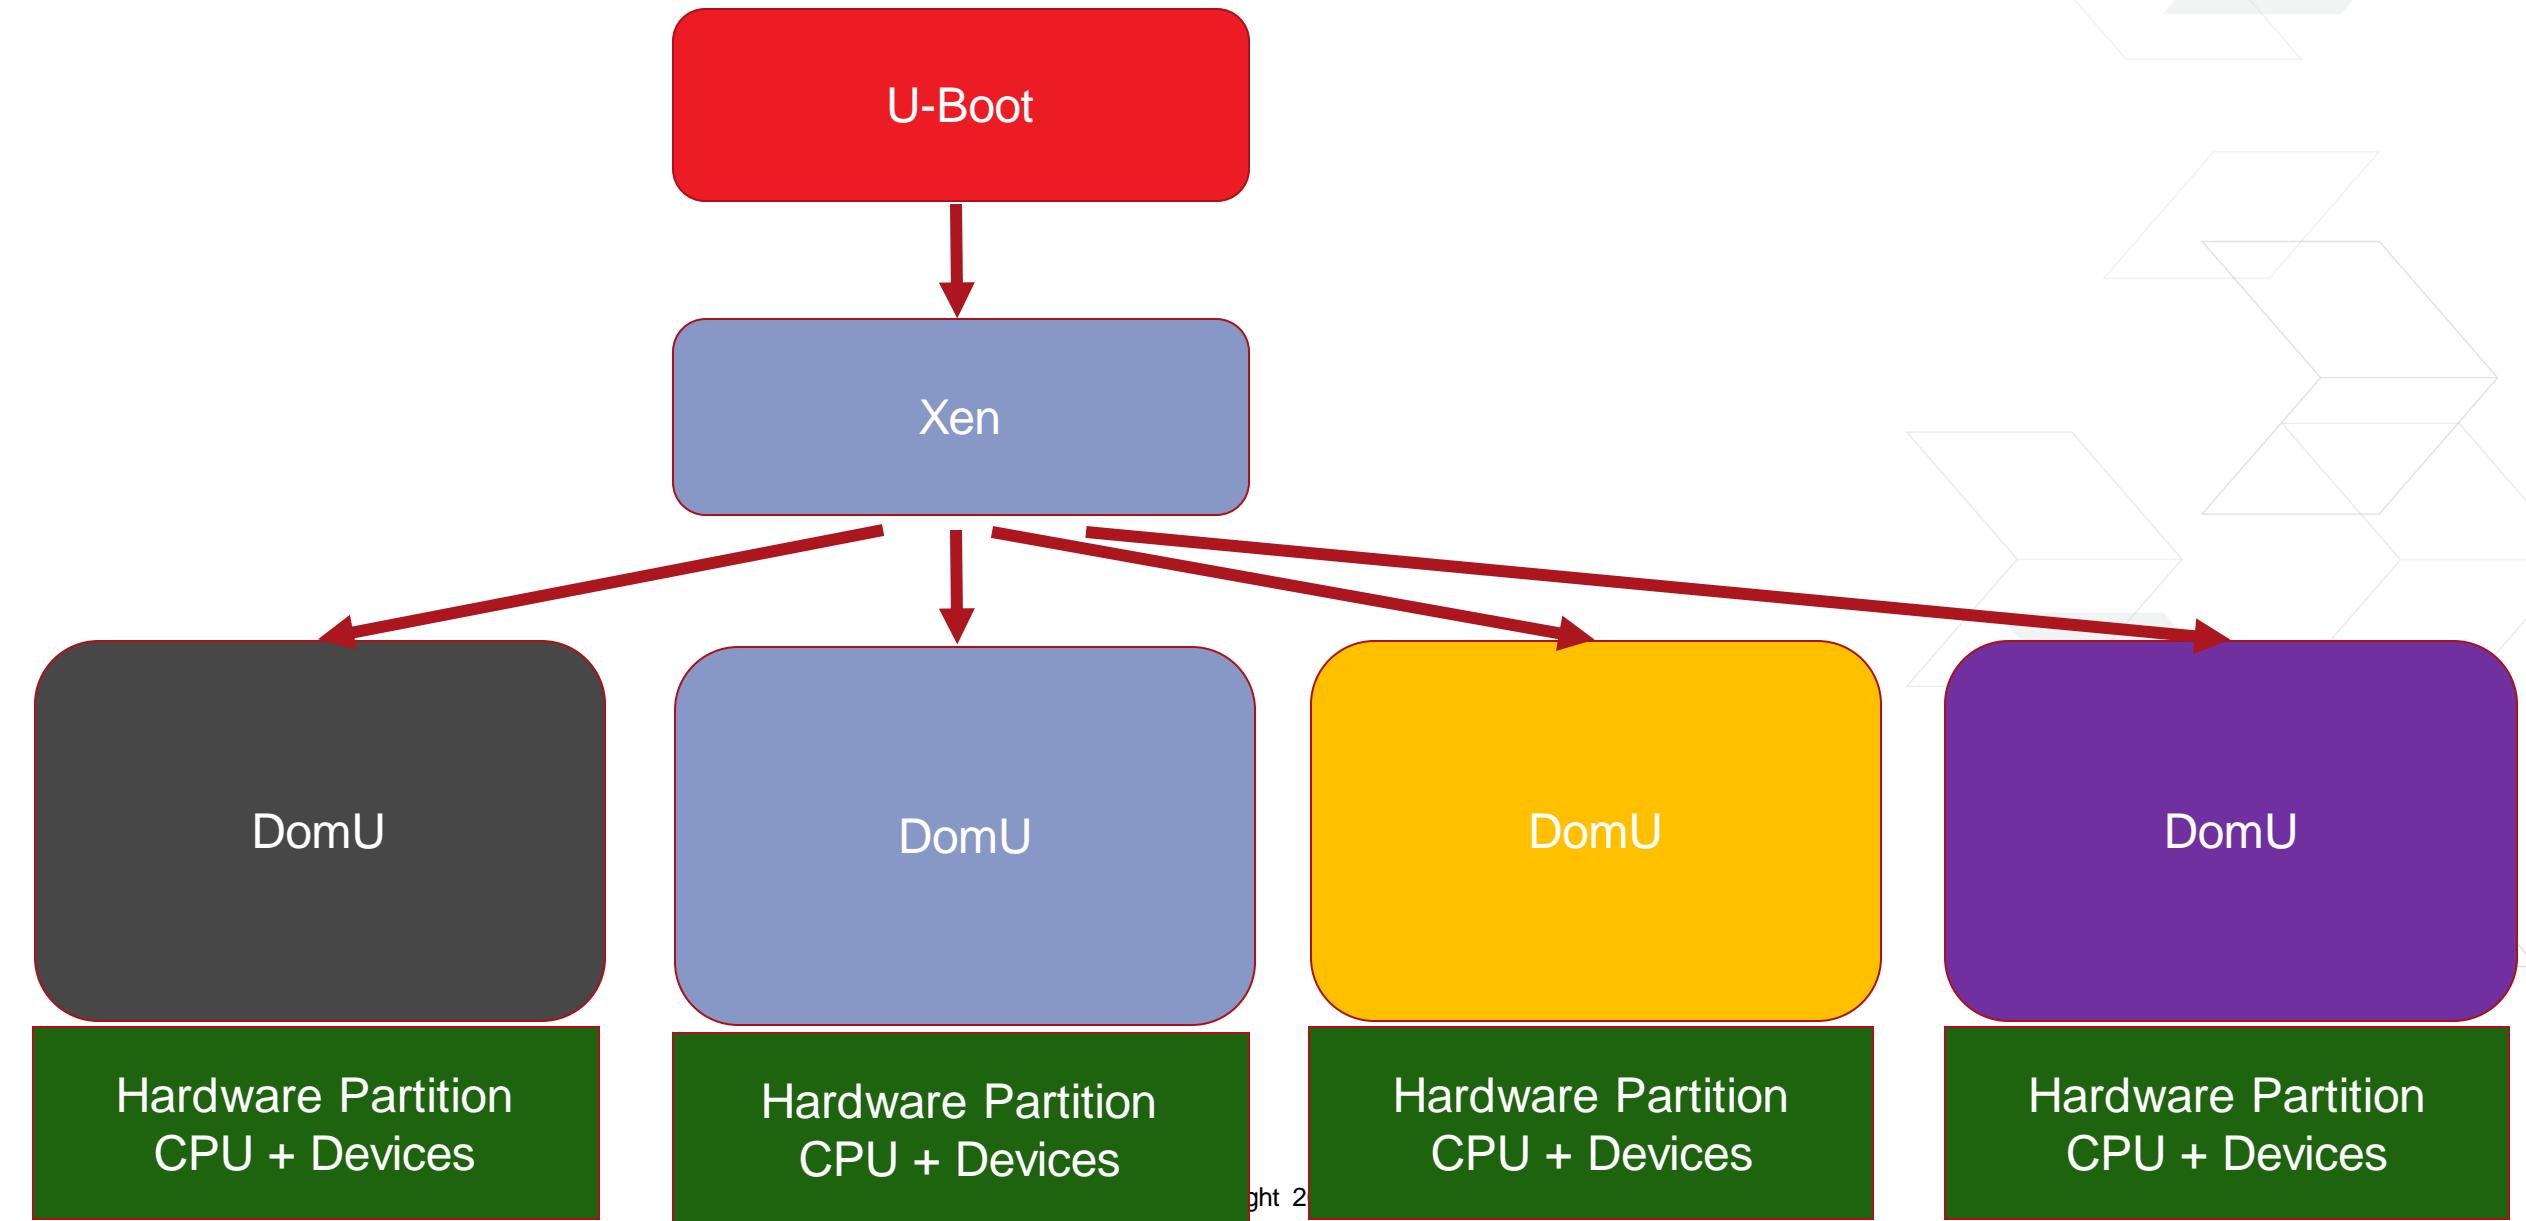

Static Partitioning: the use-case

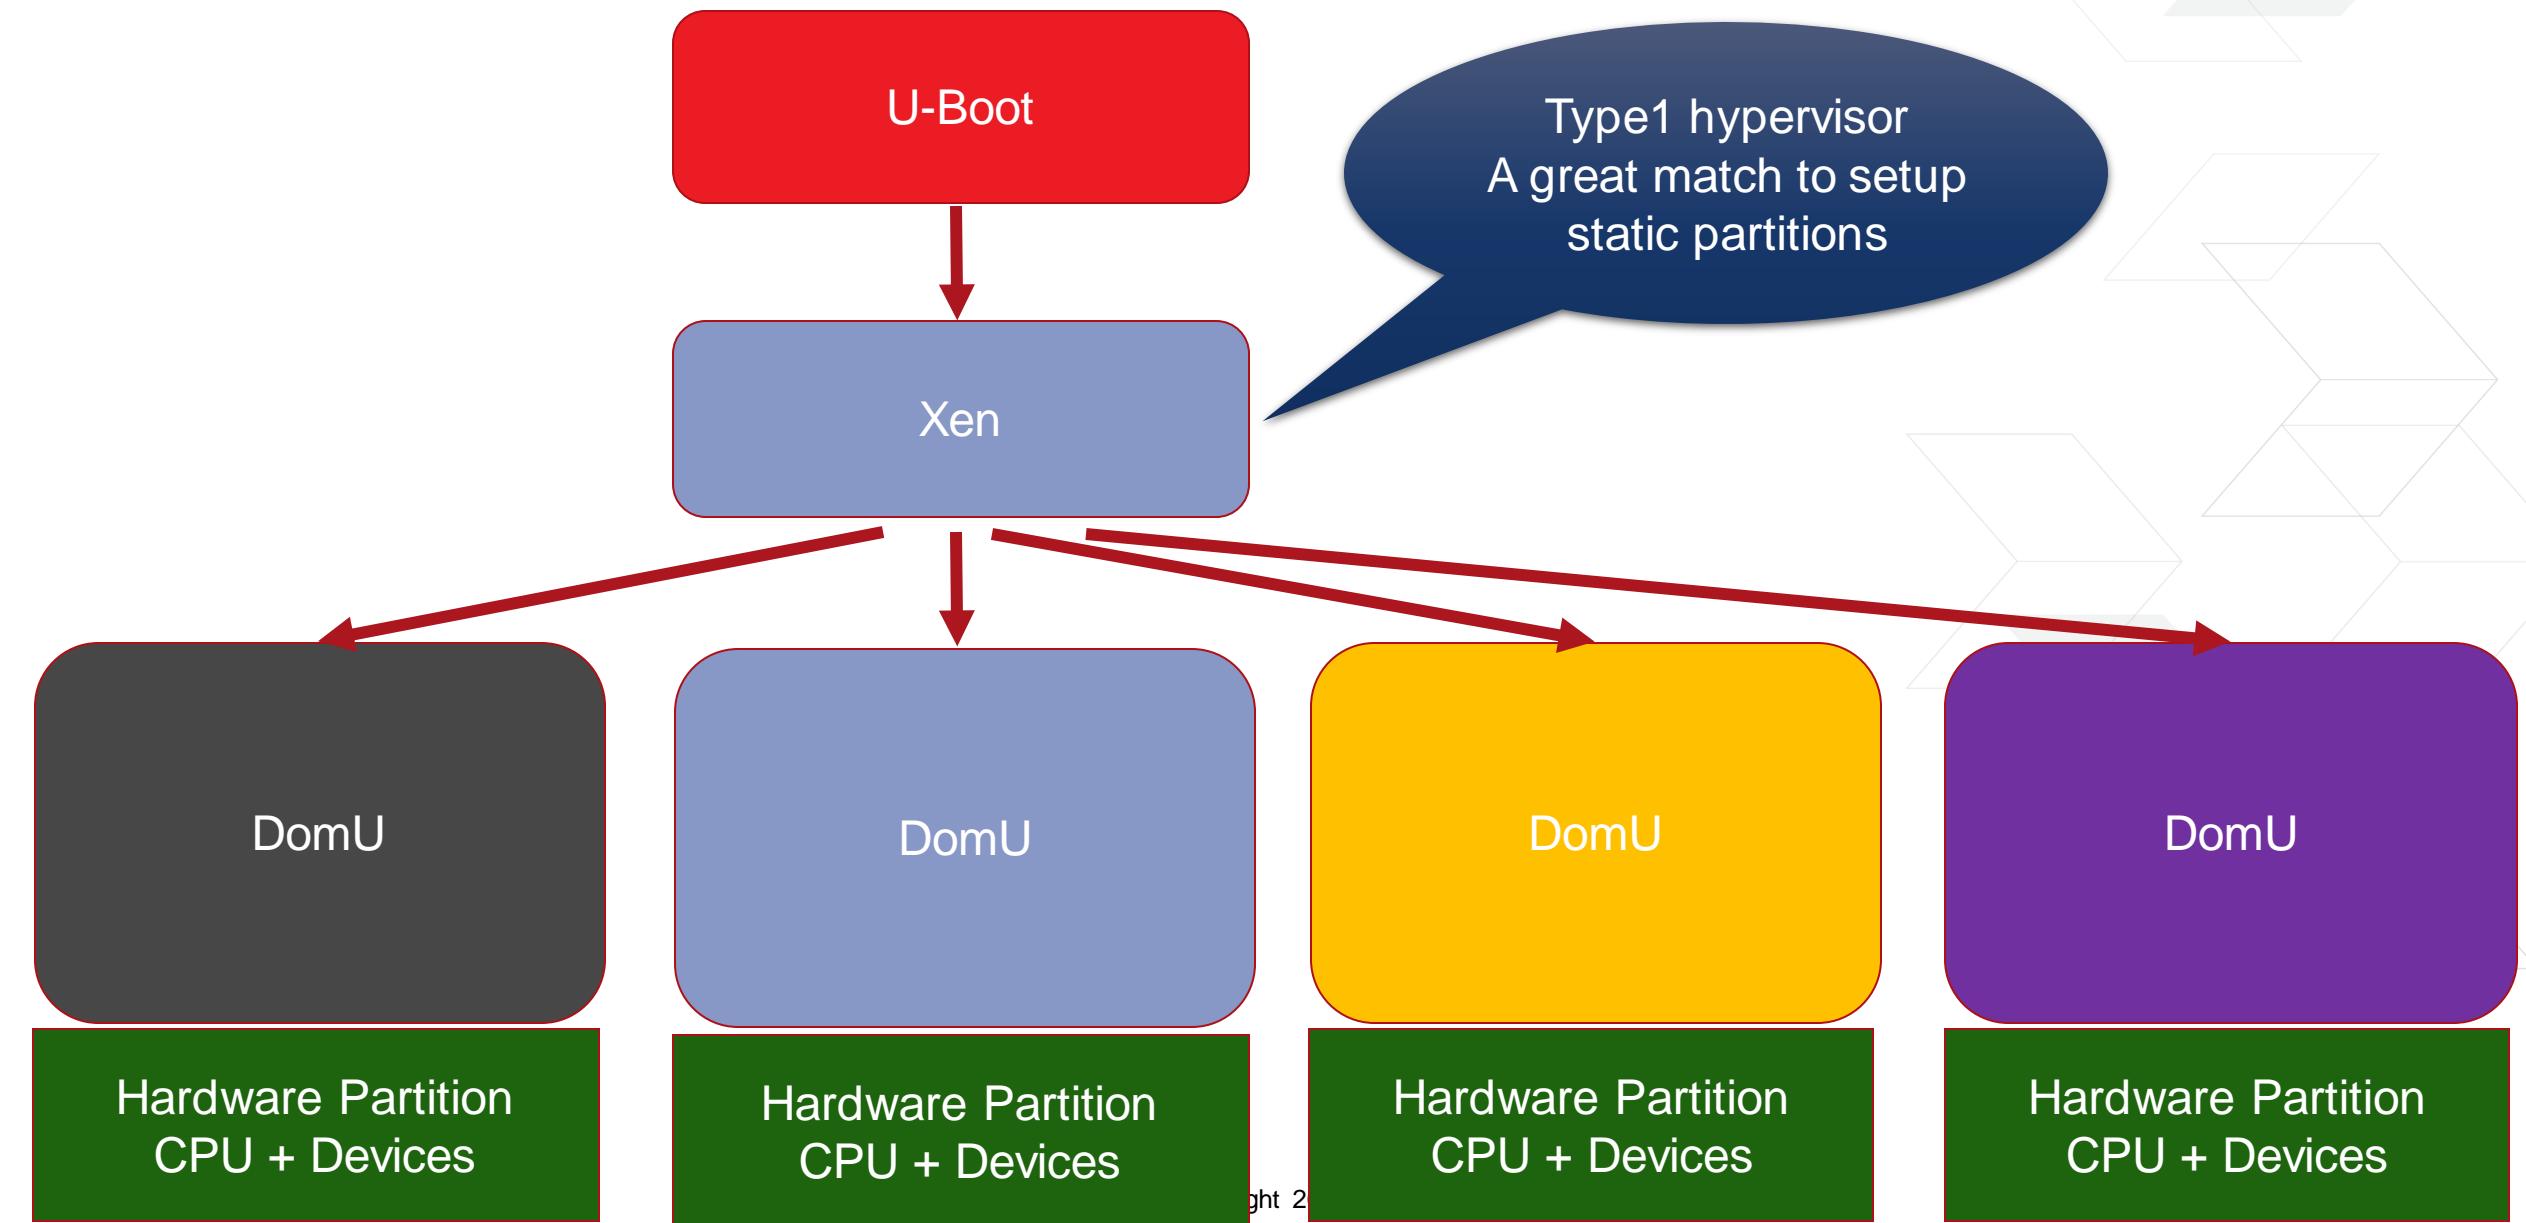

- > Mixed Criticality
- > Safety
- > Security
- > Real-Time
- > Fault isolation
- > Compartmentalization
- > Multiple OSes

Static Partitioning with Xen: the goal

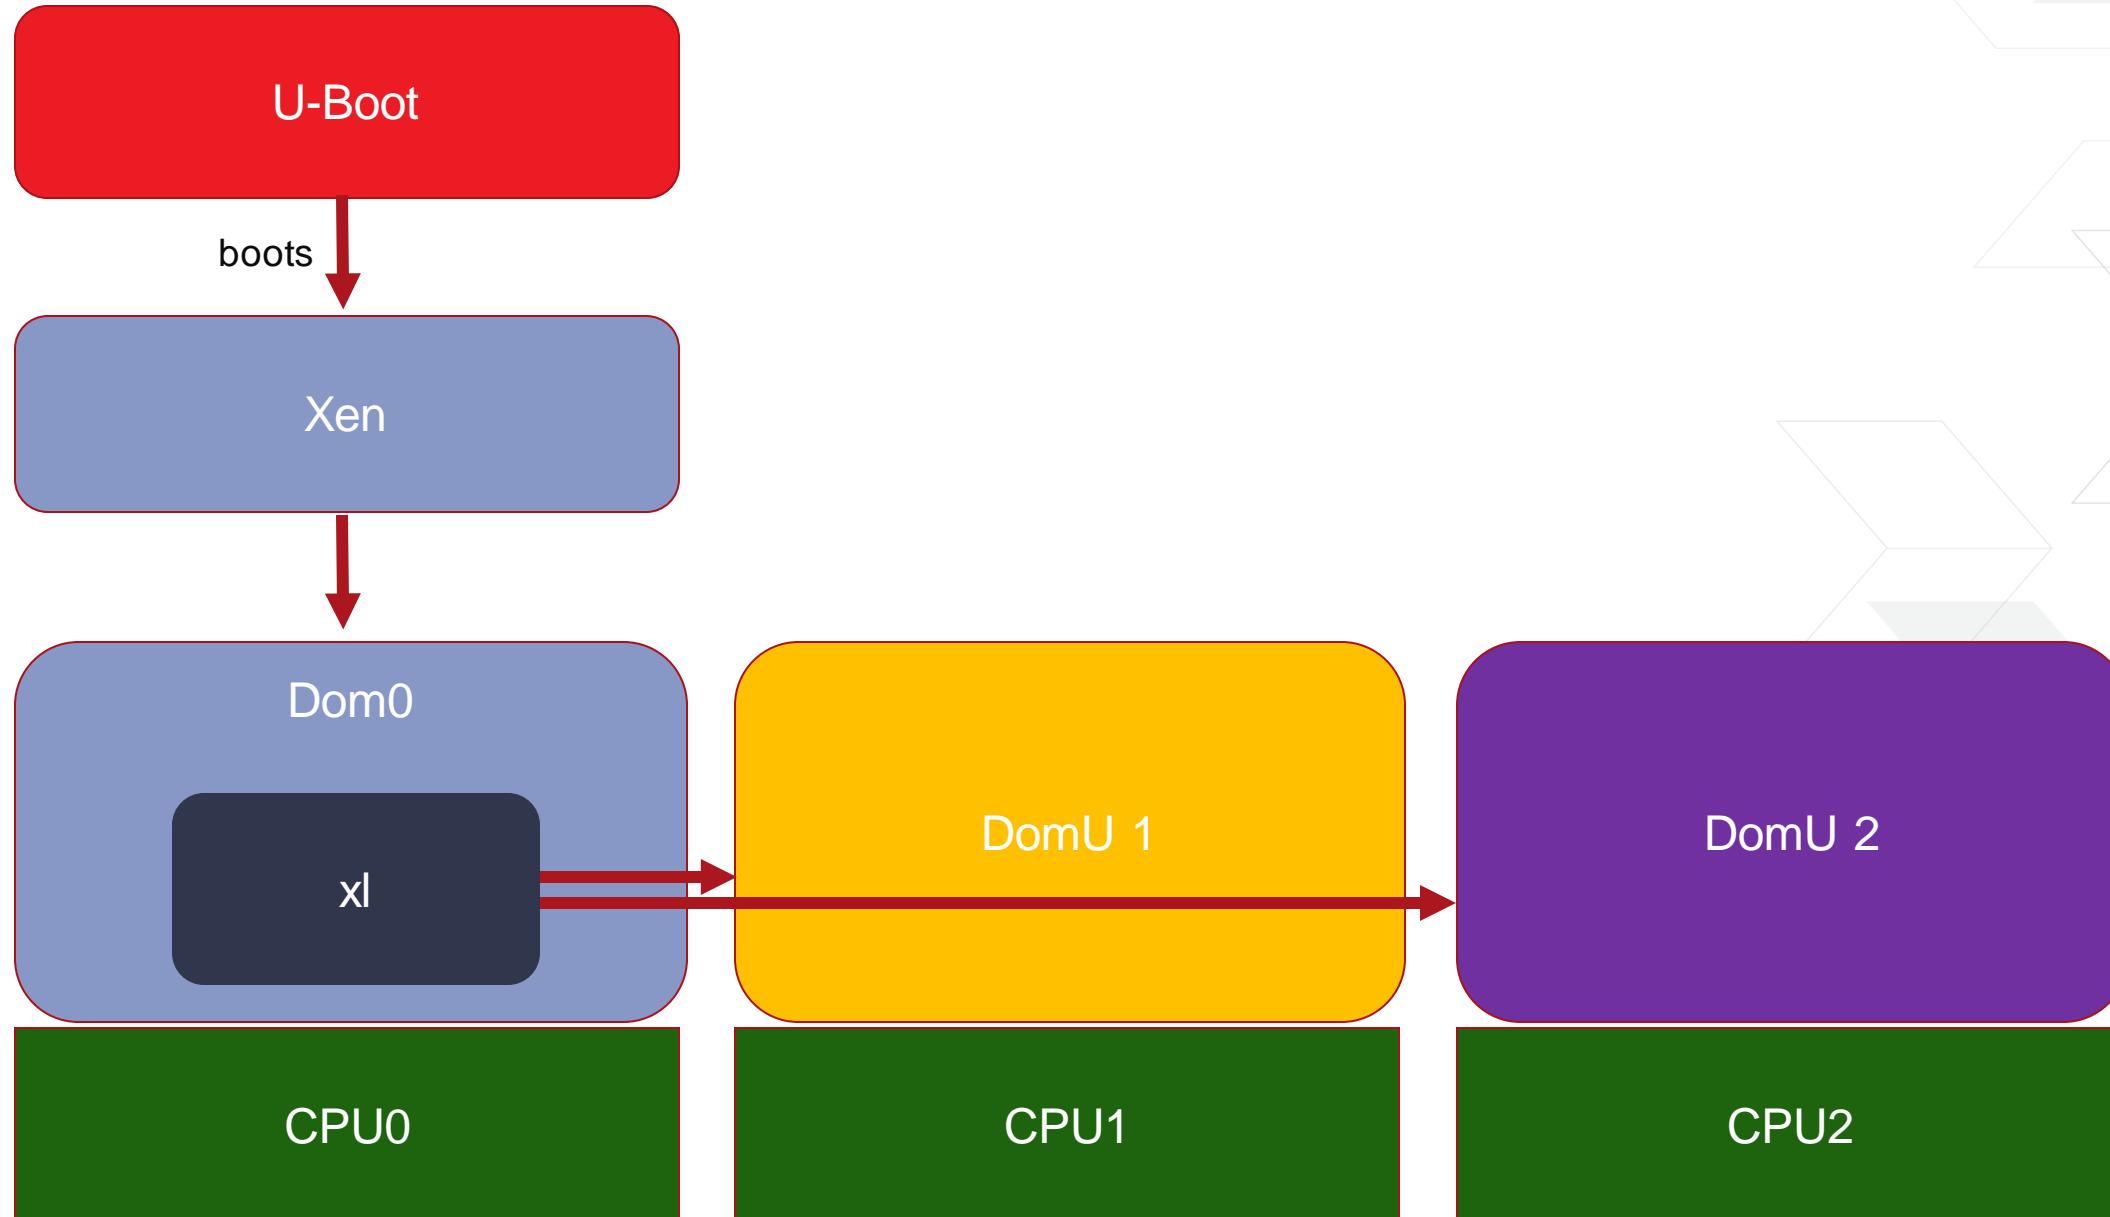

Static Partitioning with Xen: the goal

Traditional Xen System: Configuration and Boot

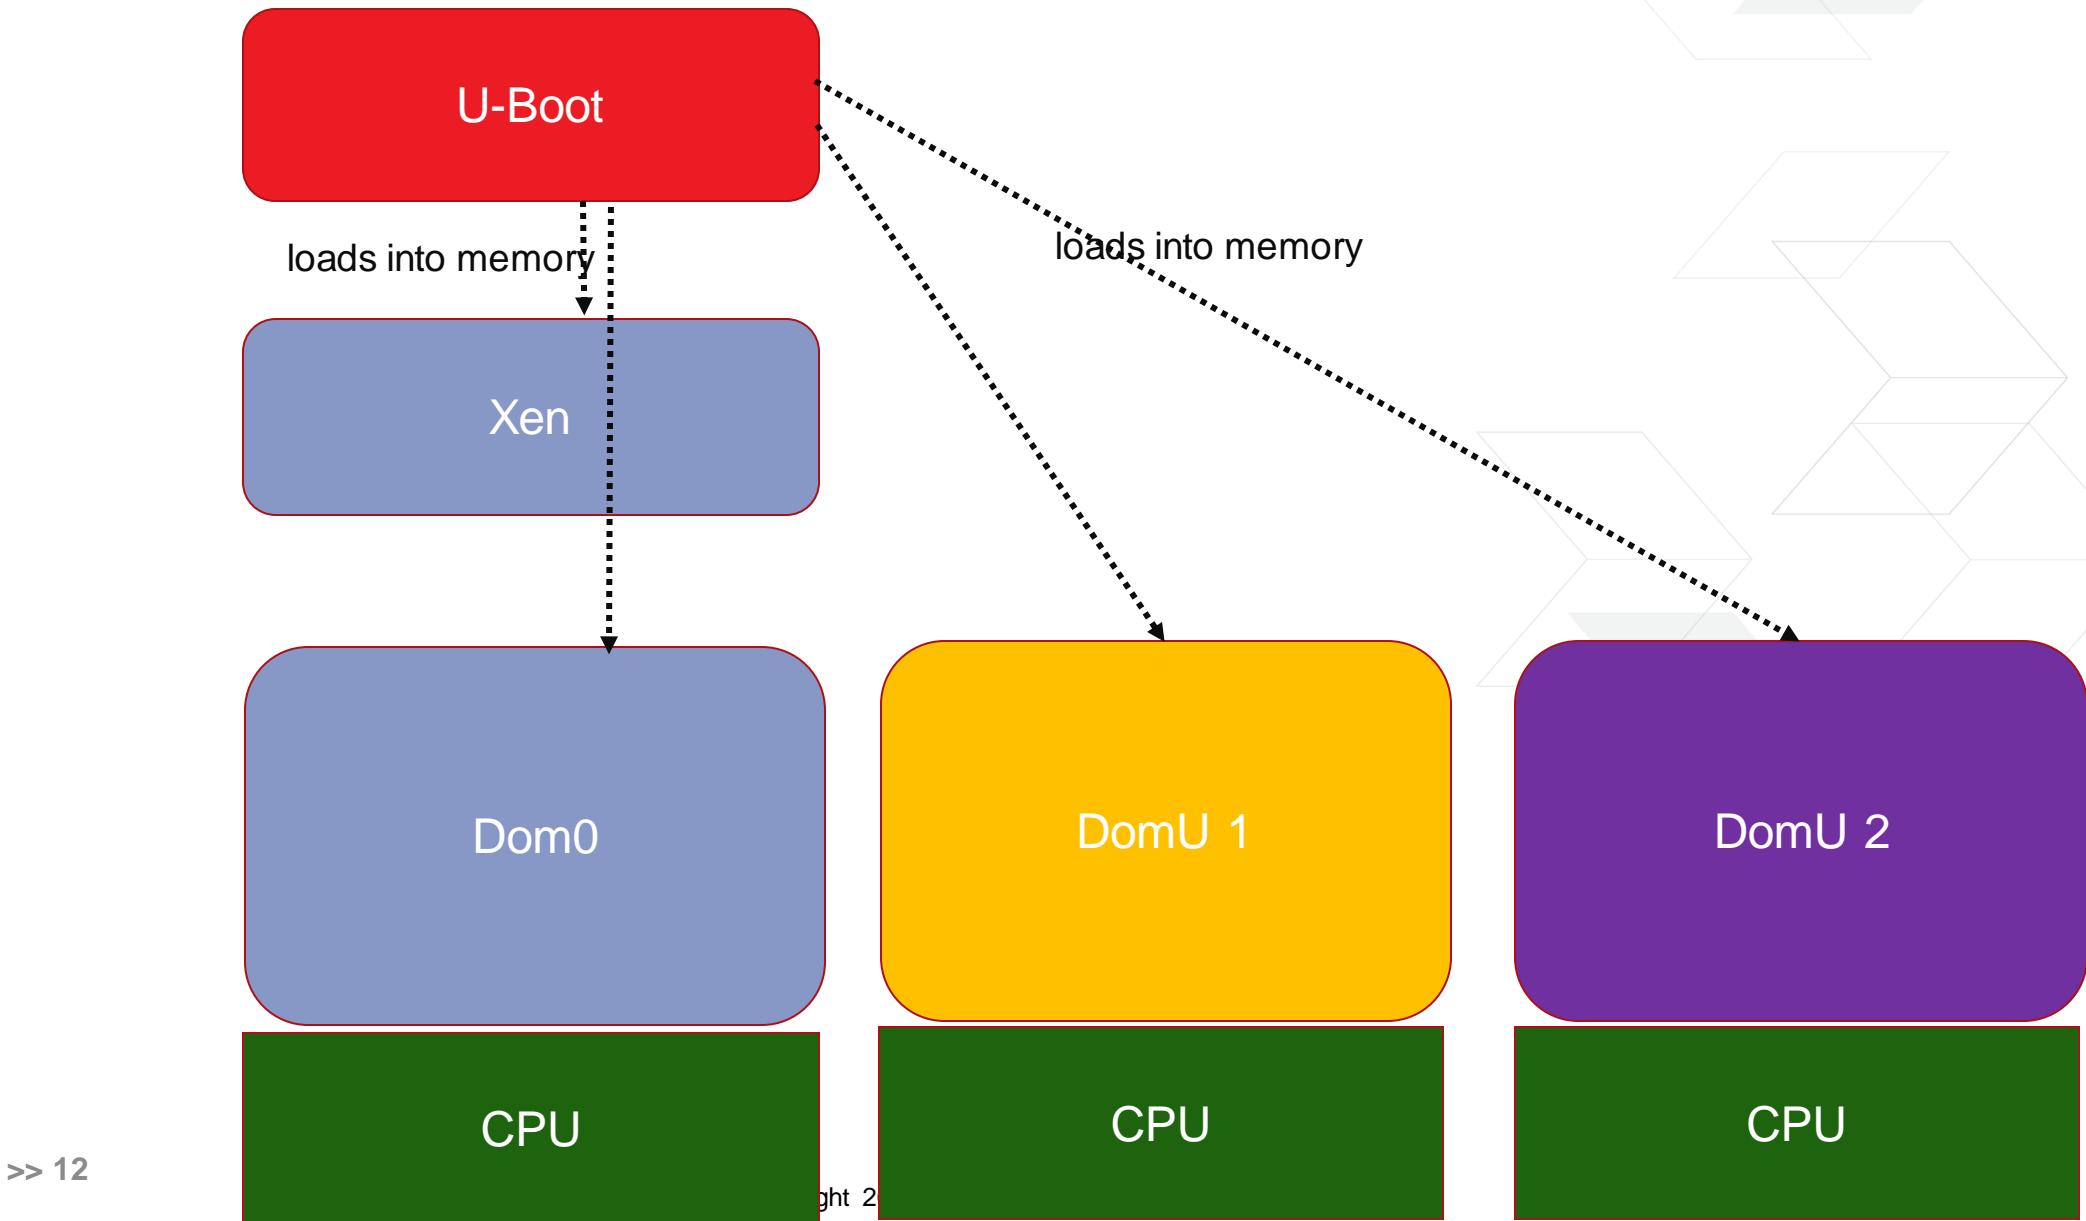

The problem

- > Requires Dom0
 - >> Dom0 is privileged
 - >> Dom0 is typically Linux
- > Boot Time
 - >> total > xen + dom0_kernel + dom0_user
- > Safety Certifications
 - >> non-Linux Dom0
 - >> exit Dom0 after boot
- > Complexity
 - >> build-time complexity
 - Yocto rootfs build
 - >> runtime flexibility
 - Monitoring
 - VMs restart

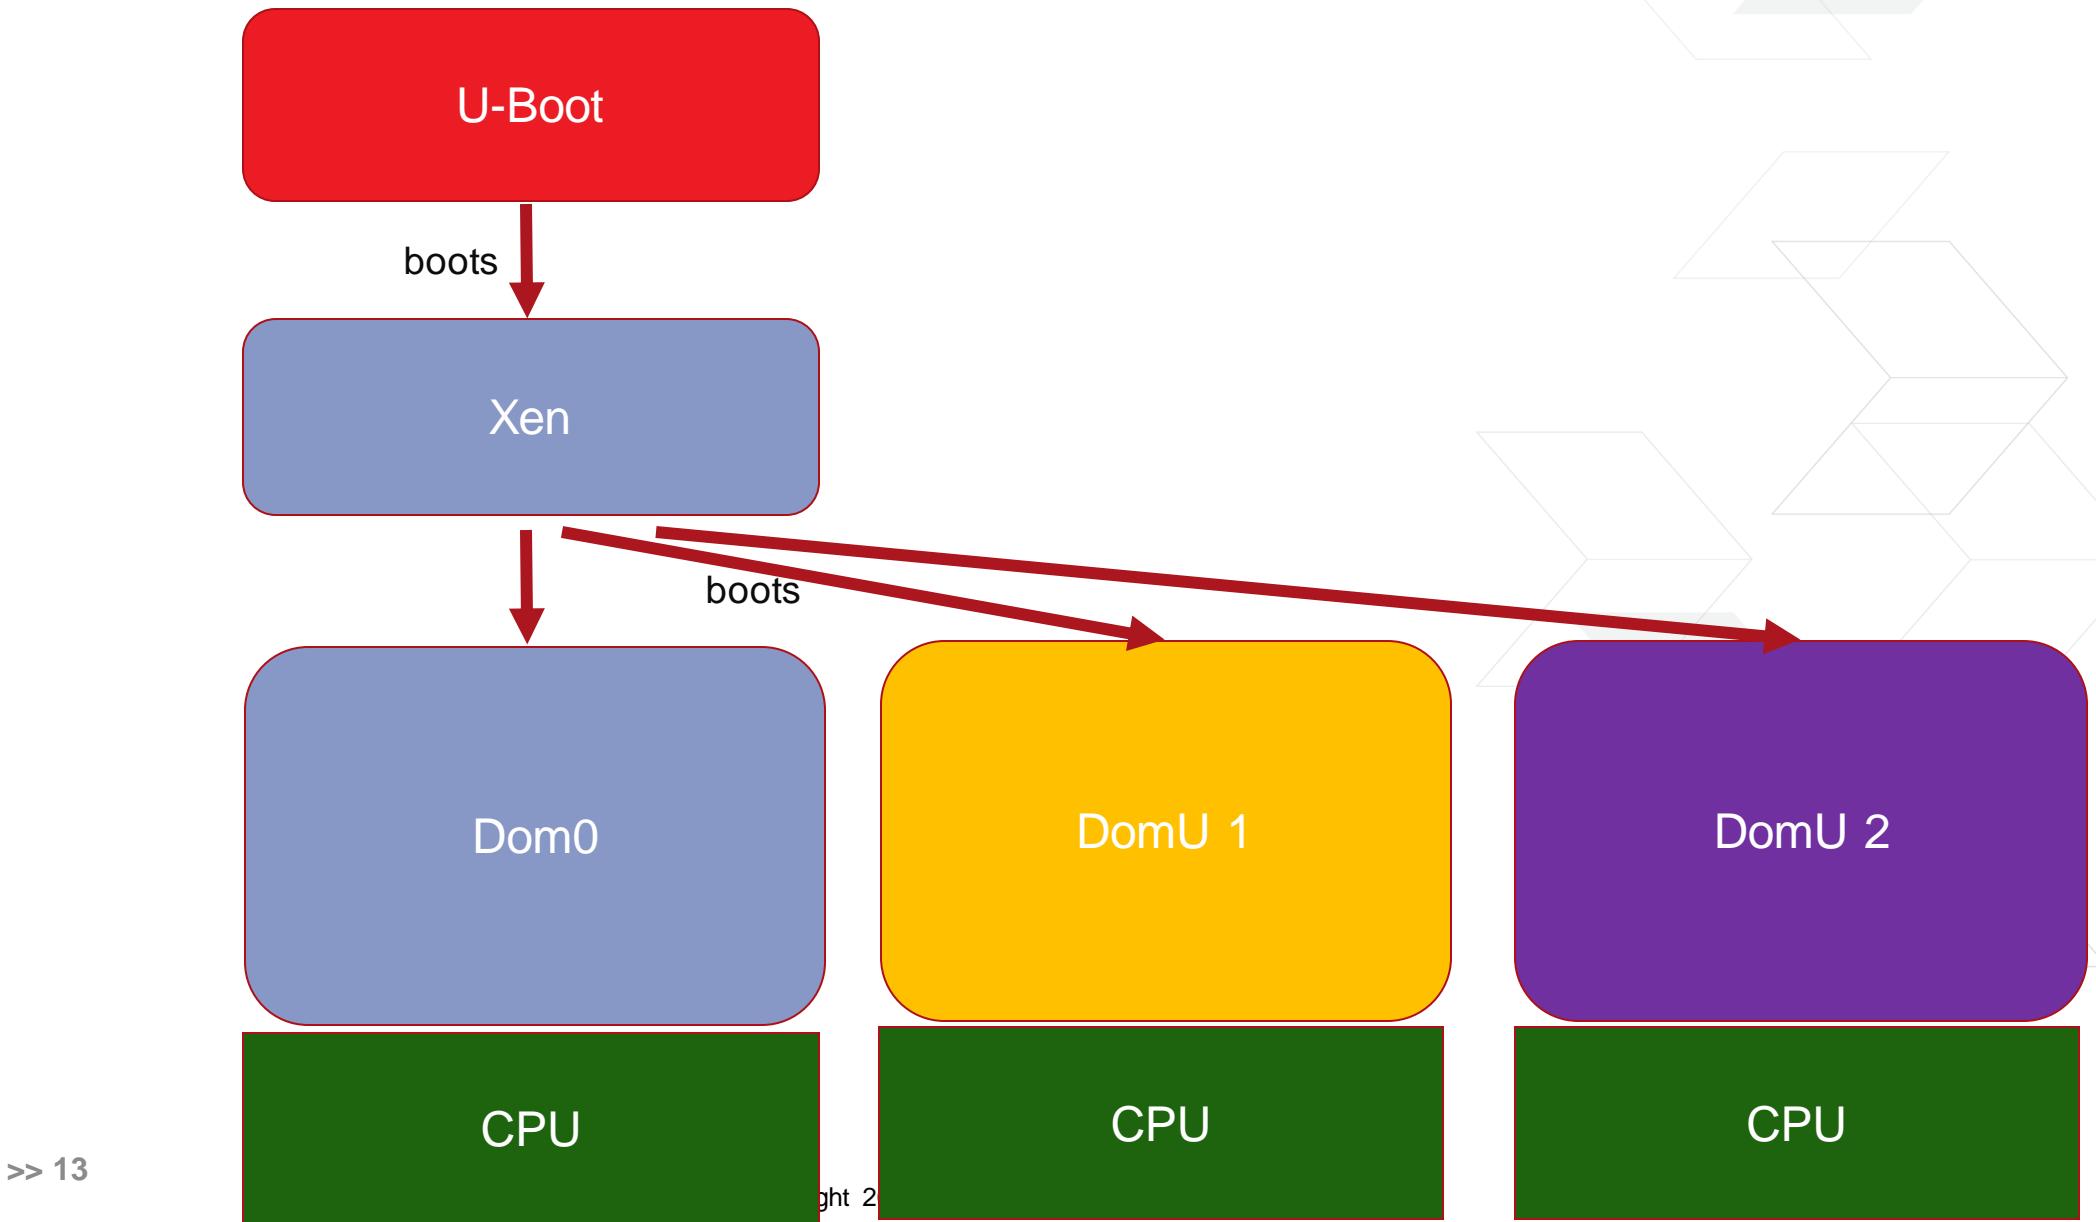

Introducing Dom0-less

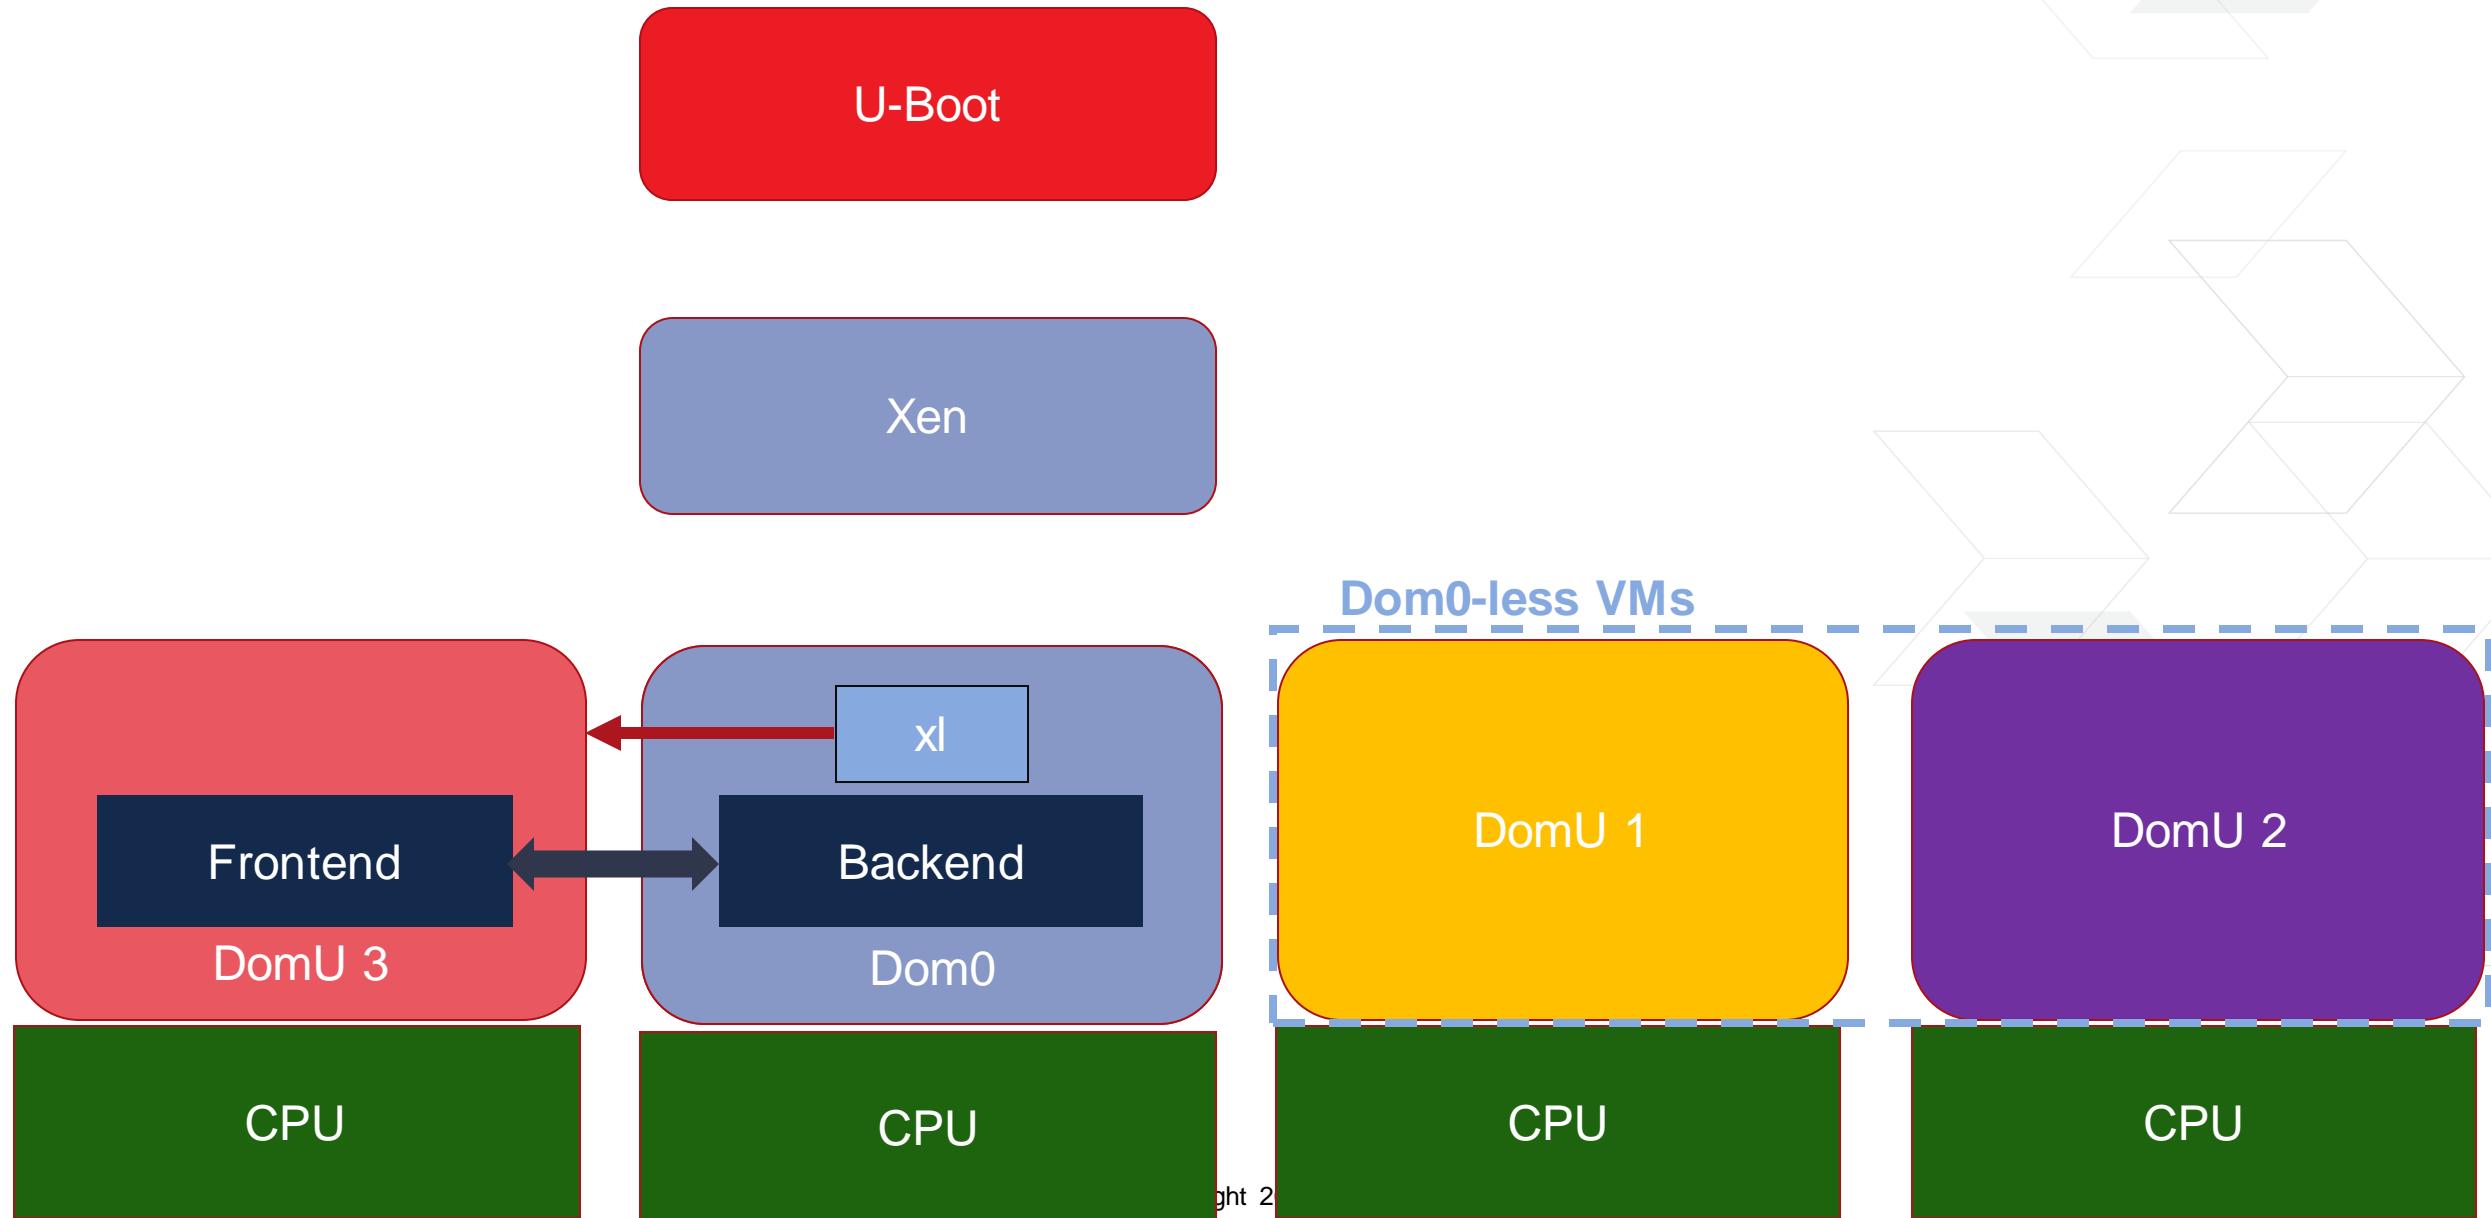

Dom0-less System Configuration and Boot

Dom0-less System Configuration and Boot

Dom0-less System Configuration and Boot

U-Boot + Device Tree protocol

- > Load all the required binaries via U-Boot commands

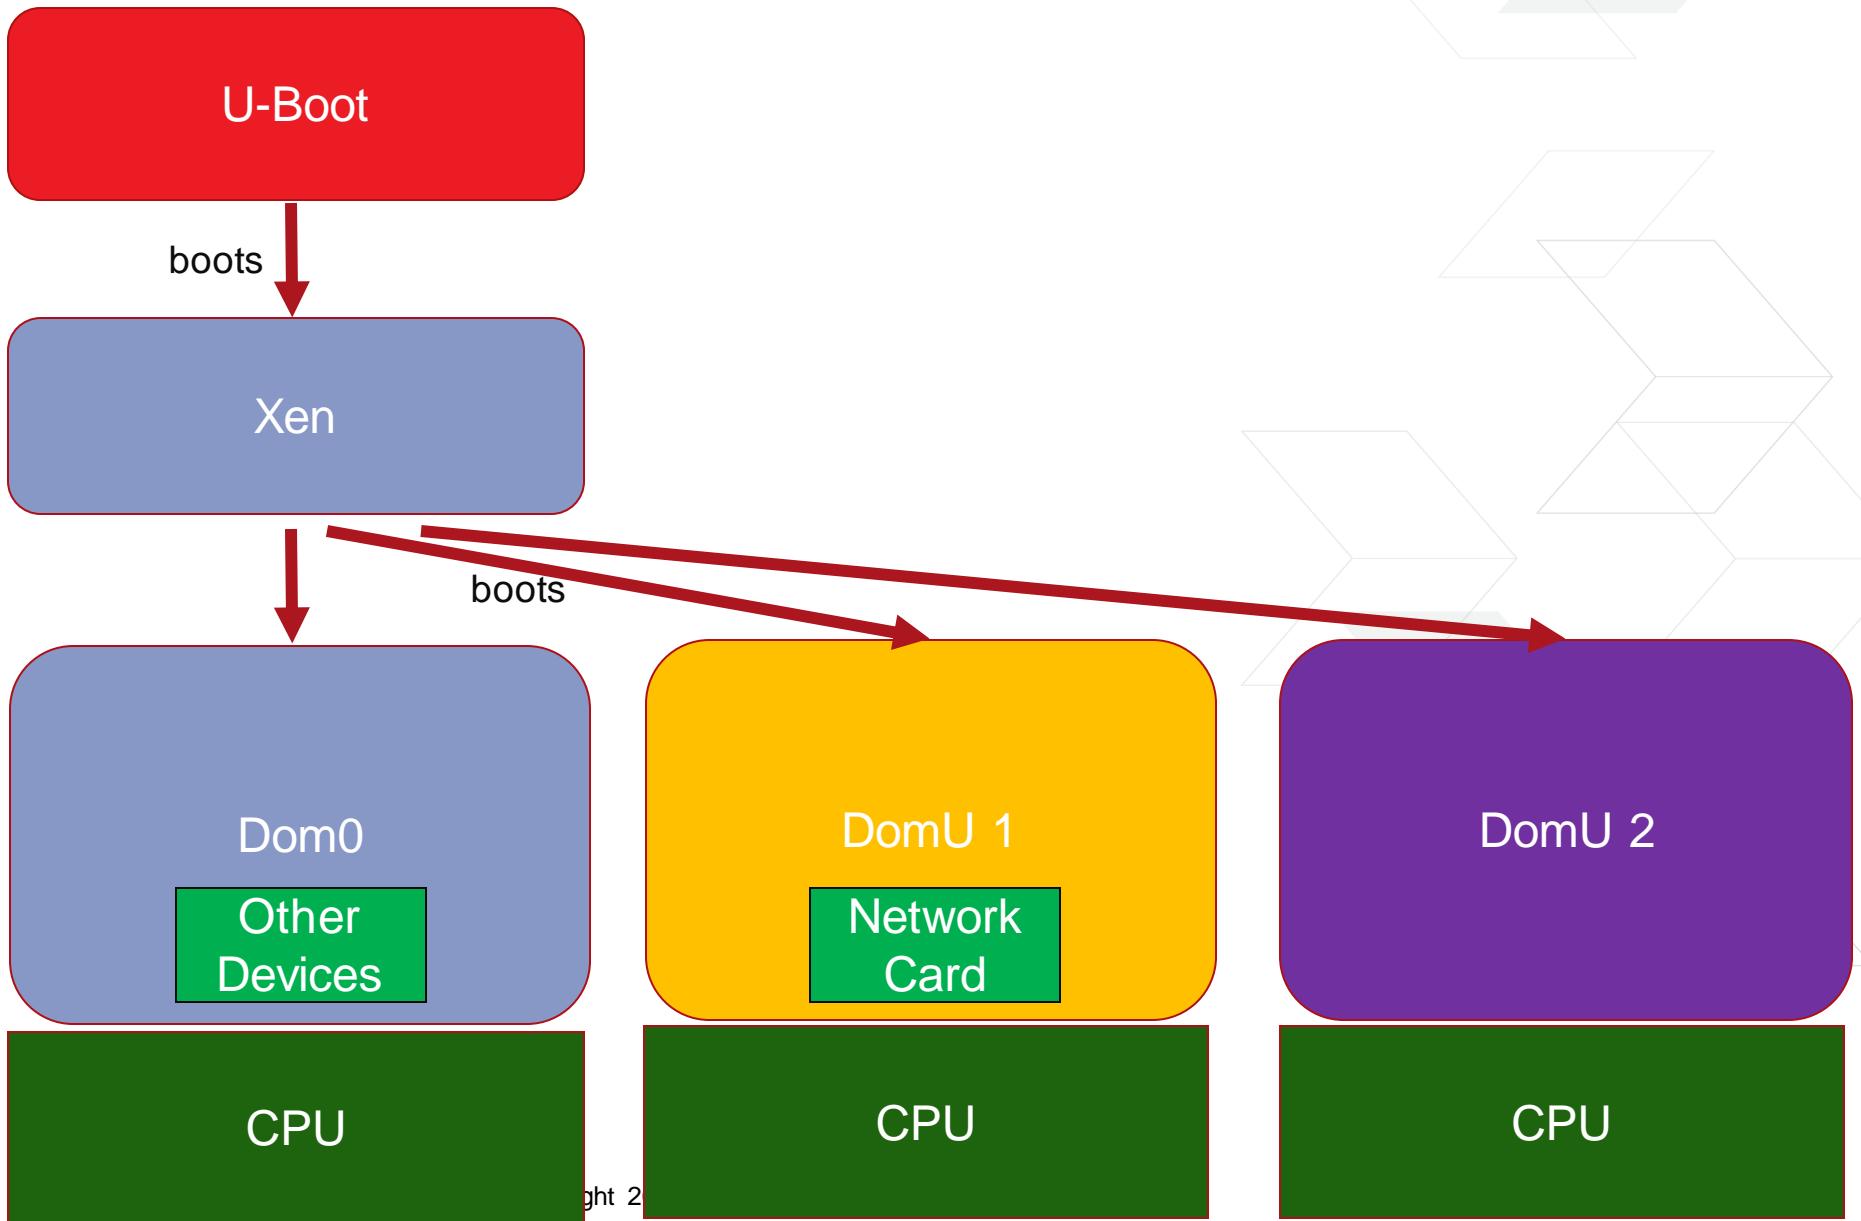

```
tftpb 0x4000000 dom0less/mpsoc.dtb  
tftpb 0x80000   dom0less/Image-dom0  
tftpb 0x5000000 dom0less/uXen  
tftpb 0xd000000 dom0less/dom0-ramdisk.cpio.uboot  
  
tftpb 0xa000000 dom0less/Image-domU  
tftpb 0xb000000 dom0less/domU-ramdisk.cpio  
  
bootm 0x5000000 0xd000000 0x4000000
```

U-Boot + Device Tree protocol

- > Advertise and configure Dom0-less VMs via Device Tree

```
domU1 {  
    compatible = "xen,domain";  
    memory = <0x0 0x20000>;  
    cpus = 1;  
    vpl011;  
  
    module@a000000 {  
        compatible = "multiboot,kernel", "multiboot,module";  
        reg = <0xa000000 0xffffffff>;  
        bootargs = "console=ttyAMA0";  
    };  
  
    module@b0000000 {  
        compatible = "multiboot,ramdisk", "multiboot,module";  
        reg = <0xb000000 0xffffffff>;  
    };  
};
```

Dom0-less Device Assignment

Dom0-less Device Assignment

- > Configured via a nested device tree snippet

```
domU1 {  
    [...]  
  
    module@a000000 {  
        compatible = "multiboot,kernel", "multiboot,module";  
        reg = <0xa000000 0xffffffff>;  
        bootargs = "console=ttyAMA0";  
    };  
  
    module@b0000000 {  
        compatible = "multiboot,ramdisk", "multiboot,module";  
        reg = <0xb0000000 0xffffffff>;  
    };  
  
    module@c000000 {  
        compatible = "multiboot,device-tree", "multiboot,module";  
        reg = <0xc0000000 0xffffffff>;  
    };  
};
```

Dom0-less Device Assignment

- > Configured via a nested device tree snippet
 - » the device tree node of the device to assign
 - » same as for regular DomUs
 - » Special properties:
 - **xen,path**: path to the device node in the main DT
 - **xen,reg**: memory to remap

```
/dts-v1/;

{

    #address-cells = <0x2>;
    #size-cells = <0x1>;

    passthrough {
        compatible = "simple-bus";
        ranges;
        #address-cells = <0x2>;
        #size-cells = <0x1>;

        ethernet@ff0e0000 {
            compatible = "cdns,zynqmp-gem";
            status = "okay";
            xen,path = "/amba/ethernet@ff0e0000";
            xen,reg = <0x0 0xff0e0000 0x1000 0x0 0xff0e0000>;
            reg = <0x0 0xff0e0000 0x1000>;
            clock-names = "pclk", "hclk", "tx_clk", "rx_clk";
            #address-cells = <0x1>;
            #size-cells = <0x0>;
        }
    }
}

[...]
```

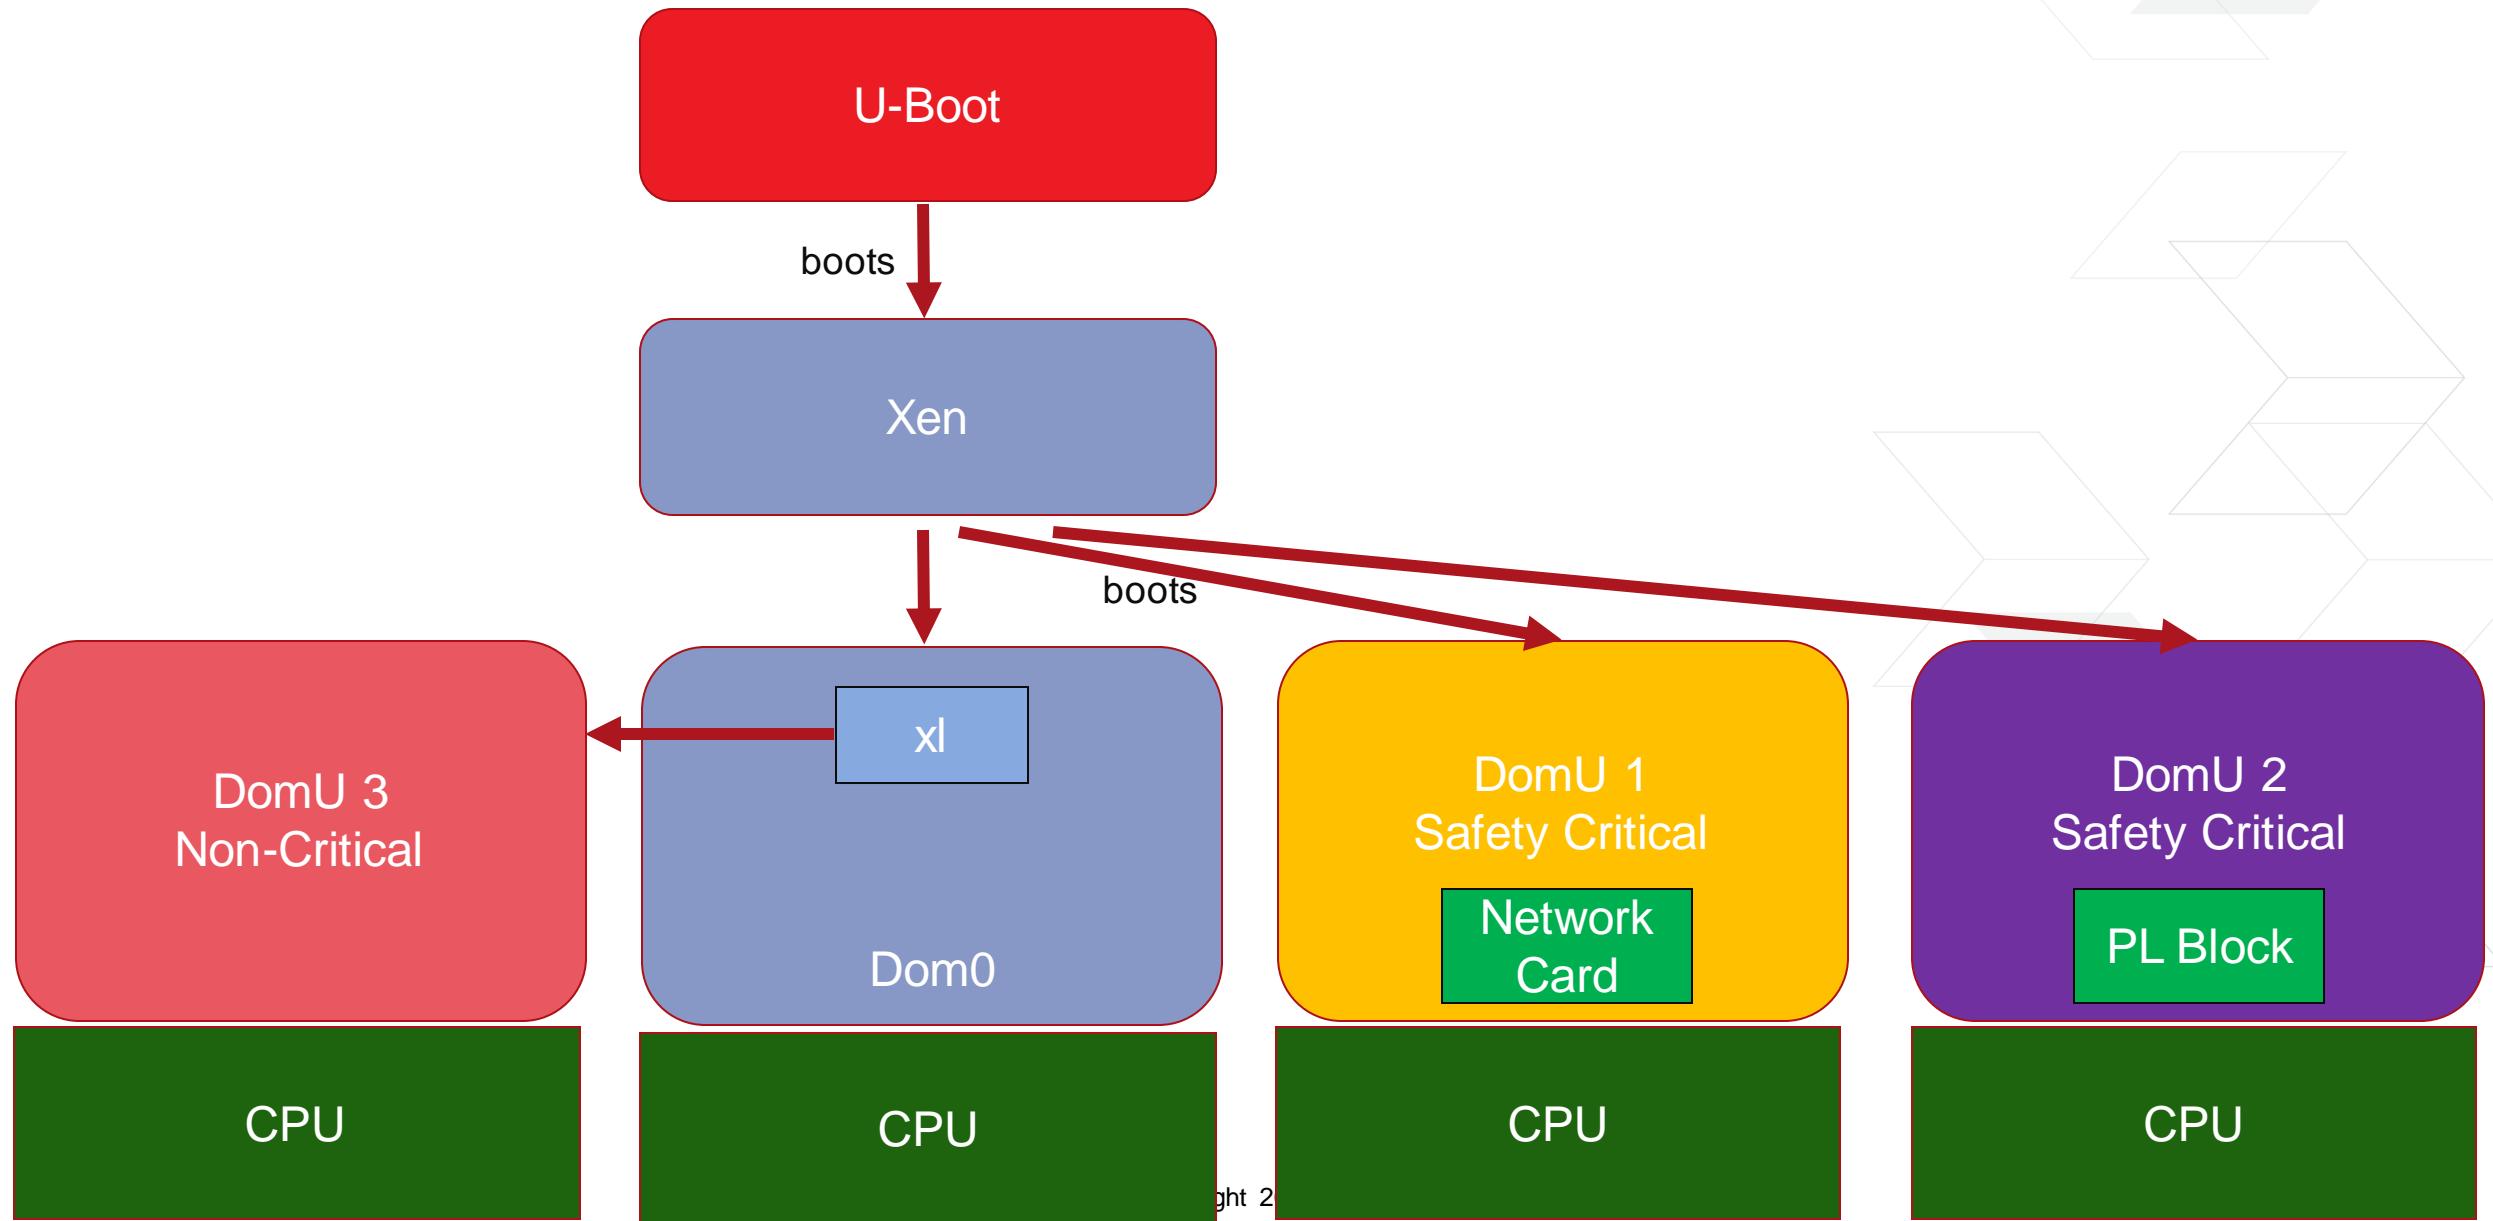

True Dom0-less

Static Partitioning with Xen

More than static partitioning

Dom0-less Pros & Cons

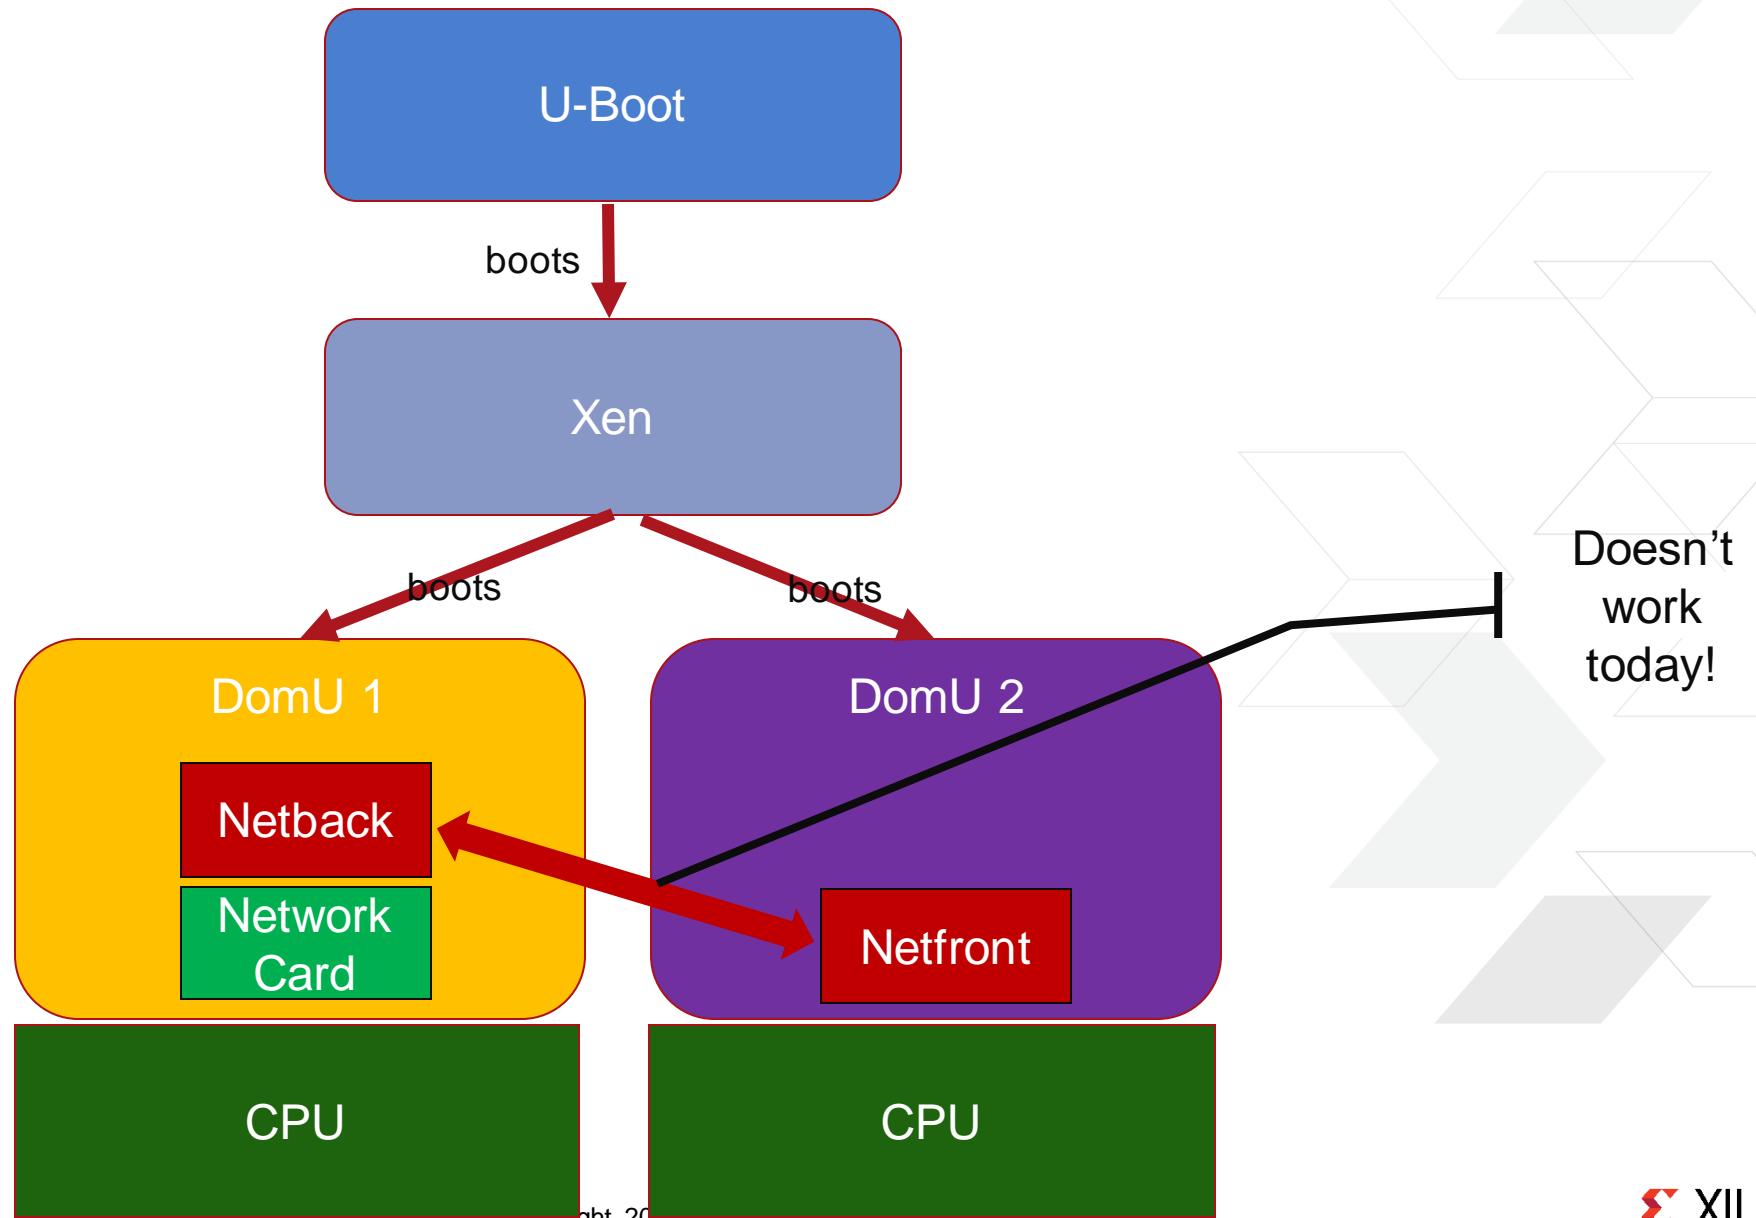

Pros:

- > Much **faster** startup times
 - » total ~= xen + domU
- > Enable static partitioning configurations
 - » Excellent for small systems
 - » Easier to certify
- > Lower Complexity
 - » No need for the Xen tools
 - » Does not require Yocto, just cross-build Xen
 - » No need for Xen support in Dom0-less VMs, no need for CONFIG_XEN

Cons:

- > No monitoring and restarting DomUs without Dom0
- > No PV frontends/backends without Dom0

Dom0-less and PV drivers

Status & TODO

> DONE

- >> basic Dom0-less booting upstream in Xen 4.12
- >> device assignment implemented and sent to the list (not upstream)

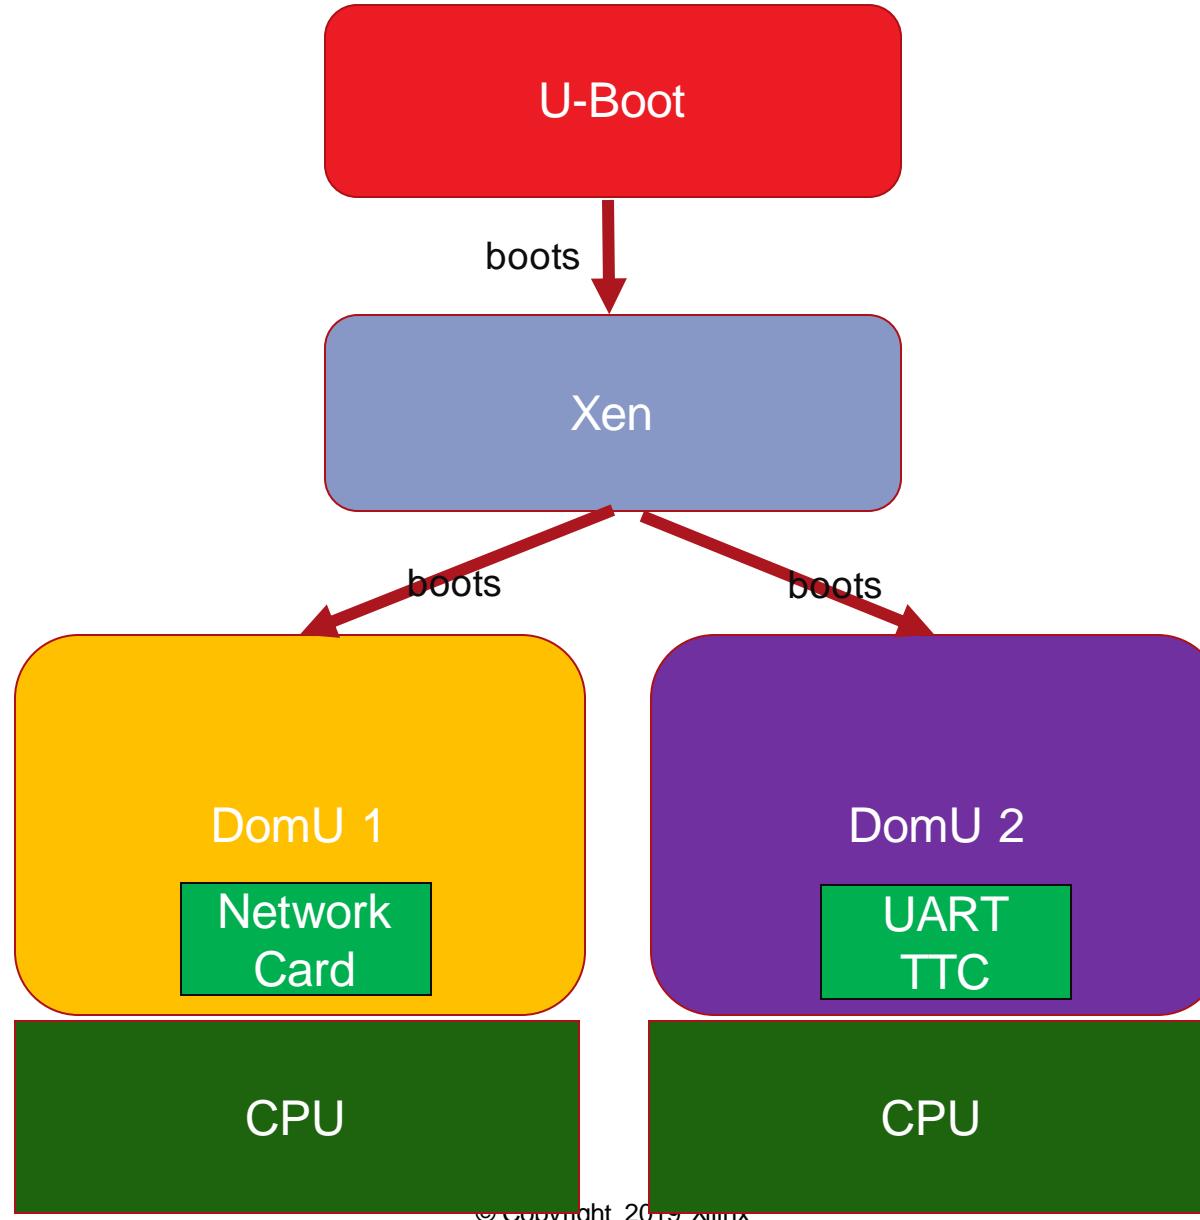

> TODO

- >> True Dom0-less
- >> Shared memory and interrupts for VM-to-VM communications
- >> PV frontends/backends drivers for Dom0-less VMs

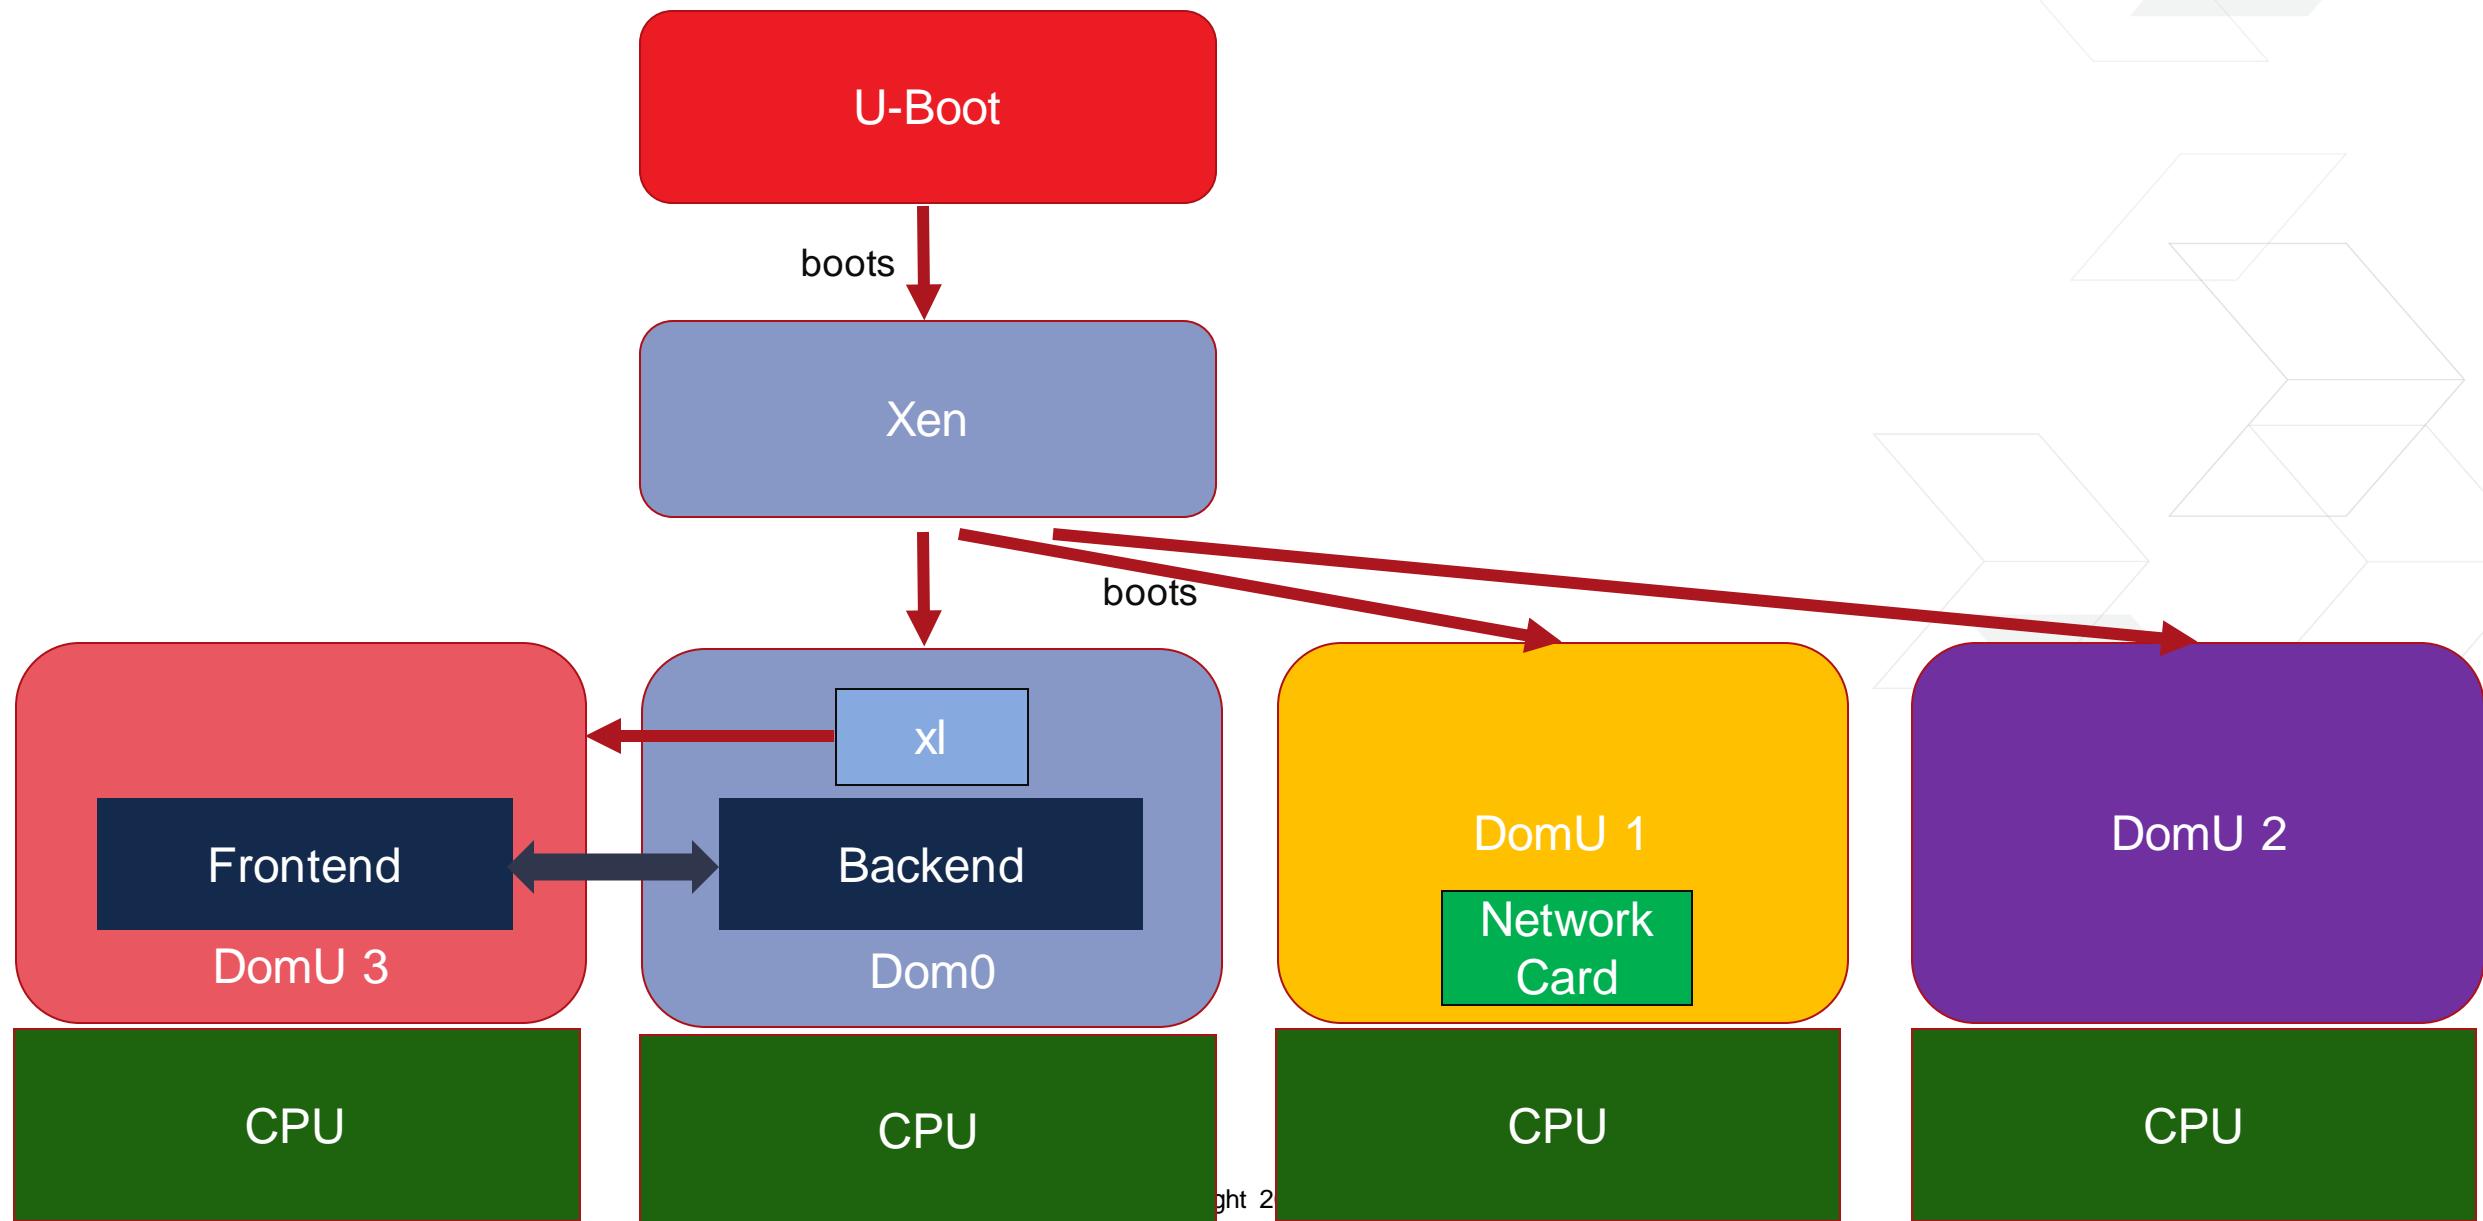

Demos

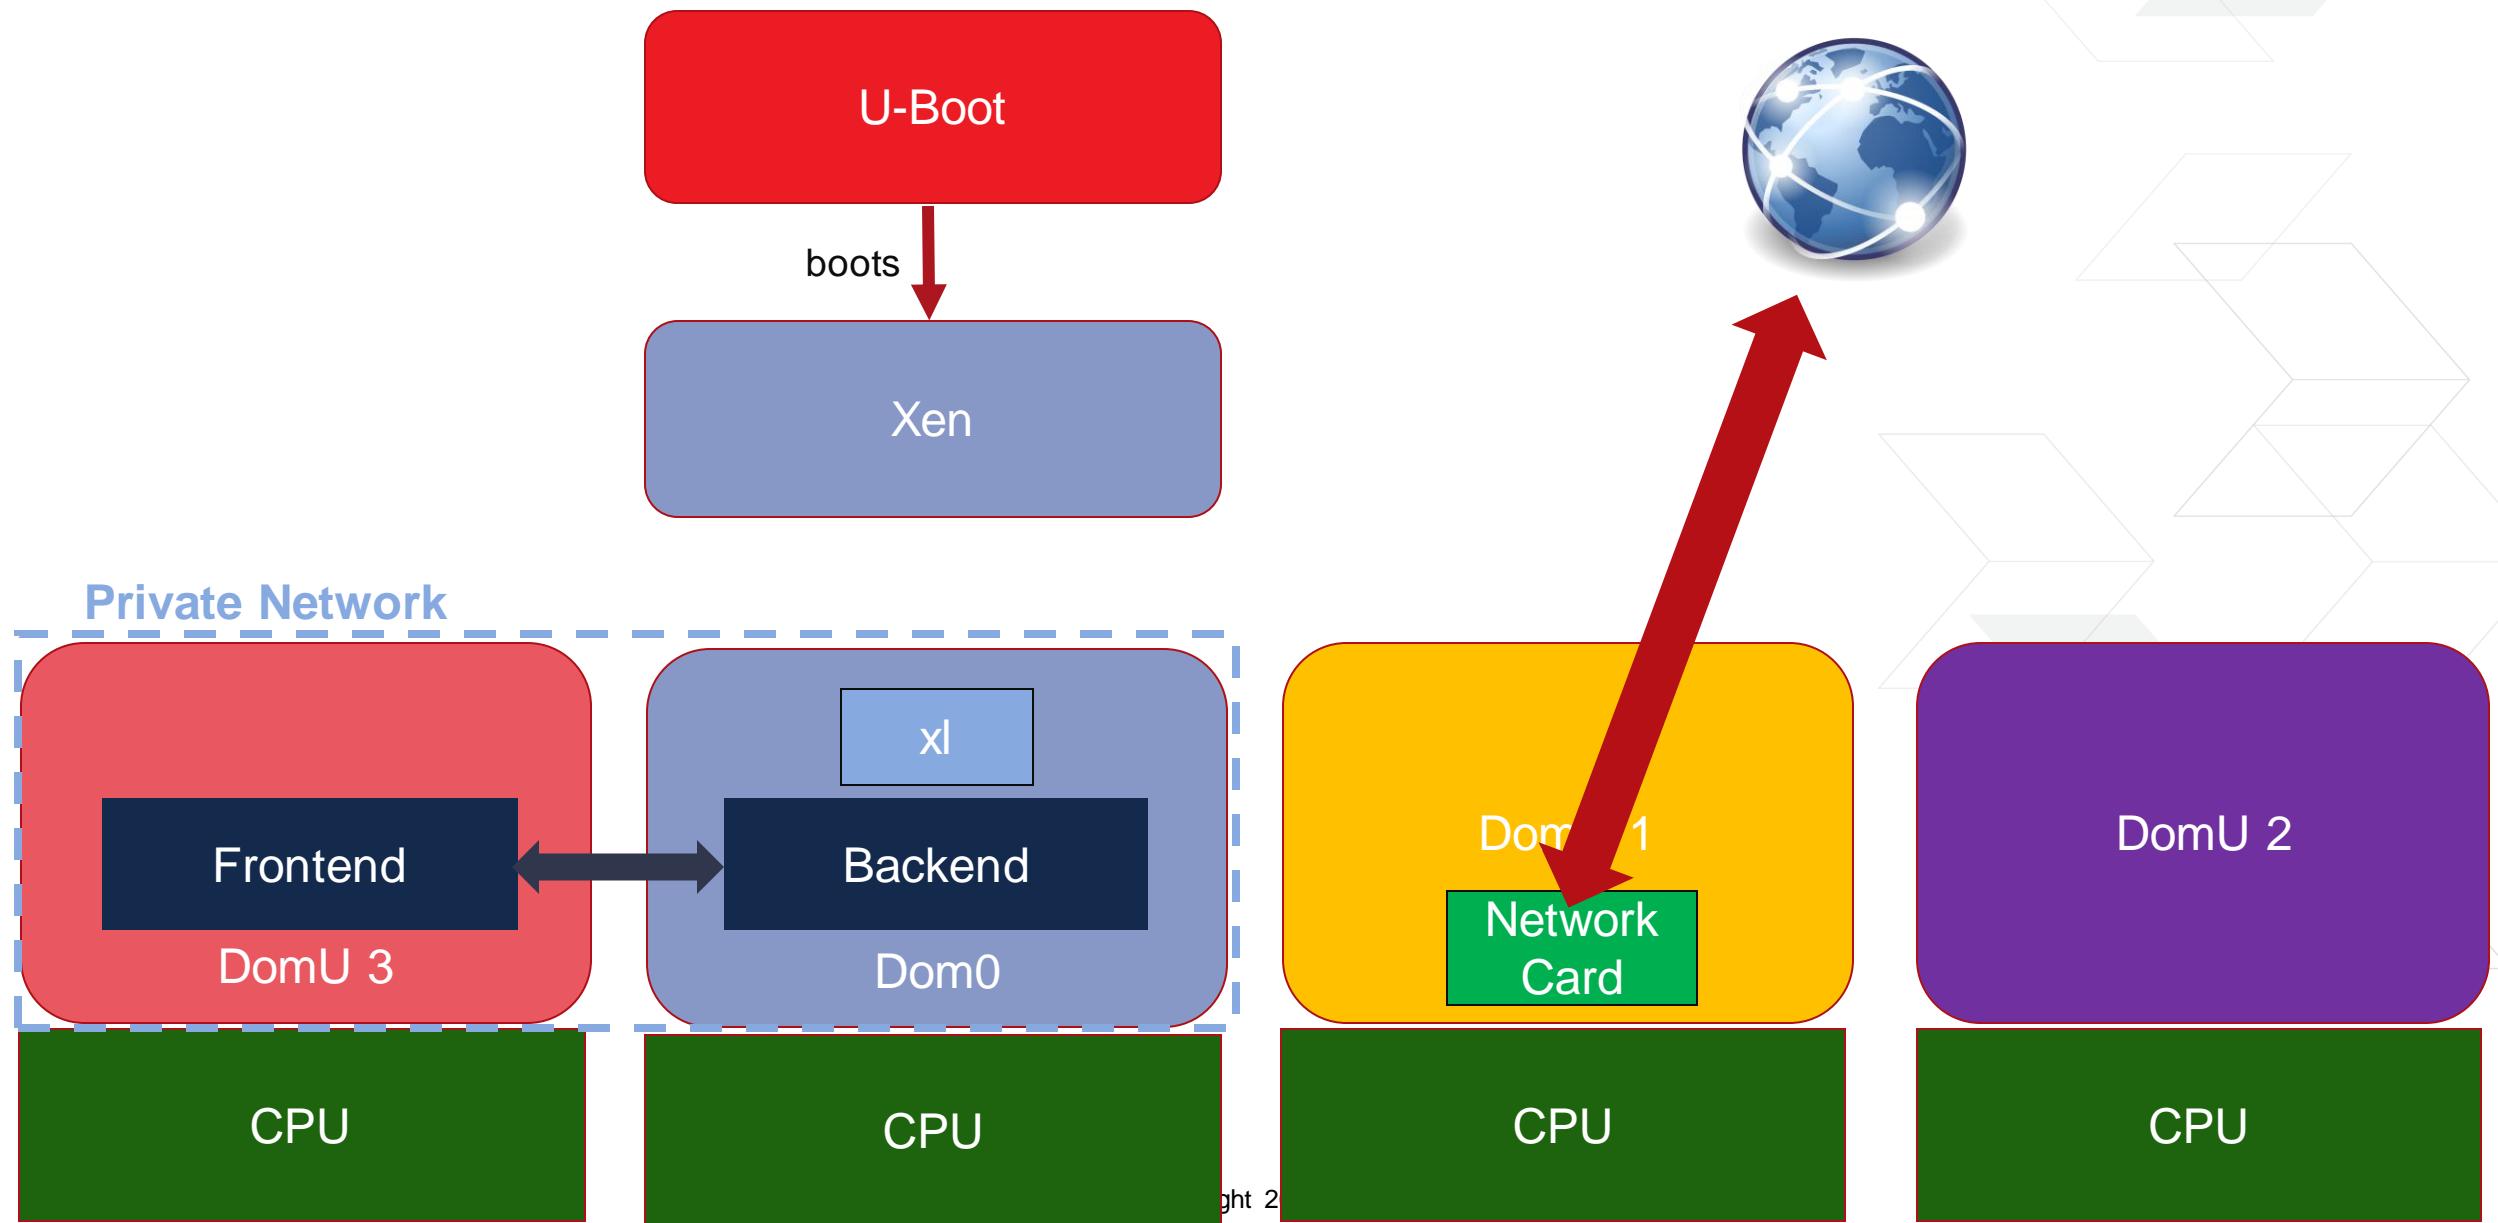

True Dom0-less

Dom0-less and PVCalls

Dom0-less and PVCalls

Questions?

**Adaptable.
Intelligent.**
